# REVISED HISTORY

DATE	ISSUE	CONTENTS OF CHANGES	S/W VERSION
APRIL/2002	ISSUE 1	Initial Release	

\* The information in this manual is subject to change without notice and should not be construed as a commitment by LGE Inc. Furthermore, LGE Inc. reserves the right, without notice, to make changes to equipment design as advances in engineering and manufacturing methods warrant.

\* This manual provides the information necessary to install, program, operate and maintain the G5200.

# **1. INTRODUCTION**

## **1.1 Purpose**

This manual provides the information necessary to repair, calibration, description and download the features of the G5200.

## **1.2 Regulatory Information**

### **A. Security**

Toll fraud, the unauthorized use of telecommunications system by an unauthorized party (for example, persons other than your company's employees, agents, subcontractors, or person working on your company's behalf) can result in substantial additional charges for your telecommunications services. System users are responsible for the security of own system. There are may be risks of toll fraud associated with your telecommunications system. System users are responsible for programming and configuring the equipment to prevent unauthorized use. LGE does not warrant that this product is immune from the above case but will prevent unauthorized use of common-carrier telecommunication service of facilities accessed through or connected to it. LGE will not be responsible for any charges that result from such unauthorized use.

### **B. Incidence of Harm**

If a telephone company determines that the equipment provided to customer is faulty and possibly causing harm or interruption in service to the telephone network, it should disconnect telephone service until repair can be done. A telephone company may temporarily disconnect service as long as repair is not done.

### **C. Changes in Service**

A local telephone company may make changes in its communications facilities or procedure. If these changes could reasonably be expected to affect the use of the G5200 or compatibility with the network, the telephone company is required to give advanced written notice to the user, allowing the user to take appropriate steps to maintain telephone service.

### **D. Maintenance Limitations**

Maintenance limitations on the G5200 must be performed only by the LGE or its authorized agent. The user may not make any changes and/or repairs expect as specifically noted in this manual. Therefore, note that unauthorized alterations or repair may affect the regulatory status of the system and may void any remaining warranty.

### **E. Notice of Radiated Emissions**

The G5200 complies with rules regarding radiation and radio frequency emission as defined by local regulatory agencies. In accordance with these agencies, you may be required to provide information such as the following to the end user.

### **F. Pictures**

The pictures in this manual are for illustrative purposes only; your actual hardware may look slightly different.

### **G. Interference and Attenuation**

An G5200 may interfere with sensitive laboratory equipment, medical equipment, etc. Interference from unsuppressed engines or electric motors may cause problems.

### **H. Electrostatic Sensitive Devices**

#### **ATTENTION**

**Boards, which contain Electrostatic Sensitive Device (ESD), are indicated by the  sign.  
Following information is ESD handling:**

- Service personnel should ground themselves by using a wrist strap when exchange system boards.
- When repairs are made to a system board, they should spread the floor with anti-static mat which is also grounded.
- Use a suitable, grounded soldering iron.
- Keep sensitive parts in these protective packages until these are used.
- When returning system boards or parts like EEPROM to the factory, use the protective package as described.

## 1. INTRODUCTION

---

### 1.3 Abbreviations

For the purposes of this manual, following abbreviations apply:

APC	Automatic Power Control
BB	Baseband
BER	Bit Error Ratio
CC-CV	Constant Current – Constant Voltage
DAC	Digital to Analog Converter
DCS	Digital Communication System
dBm	dB relative to 1 milliwatt
DSP	Digital Signal Processing
EEPROM	Electrical Erasable Programmable Read-Only Memory
EL	Electroluminescence
ESD	Electrostatic Discharge
FPCB	Flexible Printed Circuit Board
GMSK	Gaussian Minimum Shift Keying
GPIB	General Purpose Interface Bus
GPRS	General Packet Radio Service
GSM	Global System for Mobile Communications
IPIU	International Portable User Identity
IF	Intermediate Frequency
LCD	Liquid Crystal Display
LDO	Low Drop Output
LED	Light Emitting Diode
G5200	LG GSM Phone
LGE	LG Electronics
OPLL	Offset Phase Locked Loop
PAM	Power Amplifier Module
PCB	Printed Circuit Board
PGA	Programmable Gain Amplifier
PLL	Phase Locked Loop
PSTN	Public Switched Telephone Network
RF	Radio Frequency
RLR	Receiving Loudness Rating
RMS	Root Mean Square
RTC	Real Time Clock
SAW	Surface Acoustic Wave
SIM	Subscriber Identity Module
SLR	Sending Loudness Rating
SRAM	Static Random Access Memory
STMR	Side Tone Masking Rating
TA	Travel Adapter

TDD	Time Division Duplex
TDMA	Time Division Multiple Access
UART	Universal Asynchronous Receiver/Transmitter
VCO	Voltage Controlled Oscillator
VCTCXO	Voltage Control Temperature Compensated Crystal Oscillator
WAP	Wireless Application Protocol

## **2. PERFORMANCE**

---

# **2. PERFORMANCE**

## **2.1 H/W Features**

Item	Feature	Comment
Standard Battery	Li-ion, 750 mAh Size: 41 × 73.9 × 5mm Weight: 22 g	
AVG TCVR Current	GSM , EGSM: 243 mA, DCS: 209 mA	
Stand by Current	< 4 mA	
Talk time	Up to 3 hours (GSM TX Level 7)	
Stand by time	Up to 200 hours (Paging Period: 9, RSSI: -85 dBm)	
Charging time	2 hours 30mins	
RX Sensitivity	GSM, EGSM: -108 dBm, DCS: -107 dBm	
TX output power	GSM, EGSM: 32 dBm (Level 5) DCS: 29.5 dBm (Level 0)	
GPRS compatibility	Class 10 (This only applies to G5200)	
SIM card type	3V Small	
Display	128 × 128 dots LCD(Main) , 96 × 64 dotsLCD(Sub)	
Status Indicator	Soft icons Key Pad 0 ~ 9, #, *, Navigation Key, Up/Down Side Key Side Key, Confirm Key, Clear Key , Hot Key) Send Key, END/PWR Key	
ANT	External	
EAR Phone Jack	Yes	
PC Synchronization	Yes	
Speech coding	EFR/FR/HR	
Data and Fax	Yes	
Vibrator	Yes	
Receiver	Yes	
Roud Speaker	Yes	
Voice Recoding	Yes	
C-Mike	Yes	
Travel Adapter	Yes	
Options	Hands-free kit, CLA, Data Kit

21	Talk Time	GSM/ Level 7 (Battery Capacity 750mA): Up to 180 Min GSM/ Level 12 (Battery Capacity 750mA): Up to 300 Min	
22	Standby Time	Under conditions, Up to 200 hours: 1. Brand new and full 750mAh battery 2. Full charge, no receive/send and keep GSM in idle mode. 3. Broadcast set off. 4. Signal strength display set at 3 level above. 5. Backlight of phone set off.	
23	Ringer Volume	At least 80 dB under below conditions: 1. Ringer set as ringer. 2. Test distance set as 50 cm	
24	Charge Voltage	Fast Charge : $< 500 \text{ mA}$ Slow Charge: $< 60 \text{ mA}$	
25	Antenna Display	Antenna Bar Number	Power
		5	-85 dBm ~
		4	-90 dBm ~ -86 dBm
		3	-95 dBm ~ -91 dBm
		2	-100 dBm ~ -96 dBm
		1	-105 dBm ~ -101 dBm
		0	~ -105 dBm
26	Battery Indicator	Battery Bar Number	Voltage
		0	~ 3.62 V
		1	3.62 ~ 3.73 V
		2	3.73 ~ 3.82 V
		3	3.82 V ~
27	Low Voltage Warning	$3.5 \pm 0.03 \text{ V (Call)}$	
		$3.62 \pm 0.03 \text{ V (Standby)}$	
28	Forced shut down Voltage	$3.35 \pm 0.03 \text{ V}$	
29	Battery Type	1 Li-ion Battery Standard Voltage = 3.7 V Battery full charge voltage = 4.2 V Capacity: 750 mAh	
30	Travel Charger	Switching-mode charger Input: 100 ~ 240 V, 50/60 Hz Output: 5.2 V, 600 mA	

## 3. TECHNICAL BRIEF

### 3.1 General Description

The RF part consists of a transmitter part, a receiver part, a synthesizer part, a voltage supply part, a VCTCXO part. And the main RF Chipset CX74017[U411] is a single-chip dual-band transceiver for the extended global system for mobile communication[E- GSM900MHz]/Digital communication system[DCS1800MHz] voice and data transfer applications.

This device integrated a direct conversion receiver architecture, which eliminates the need of Intermediate Frequency, a transmitter based on a modulation loop architecture and fractional-N synthesizer part with built in TXVCO and Local-VCO.

### 3.2 Receiver

The Receiver part in CX74017 contains all active circuits completely, full receiver chain with the exception of discrete front-end RF SAW filters. The filtered and amplified signal is down converted in the RF-mixer to the baseband output. The receiver path is supported by internal channel filtering.

The RF front-end circuit is shown Figure 3-1.

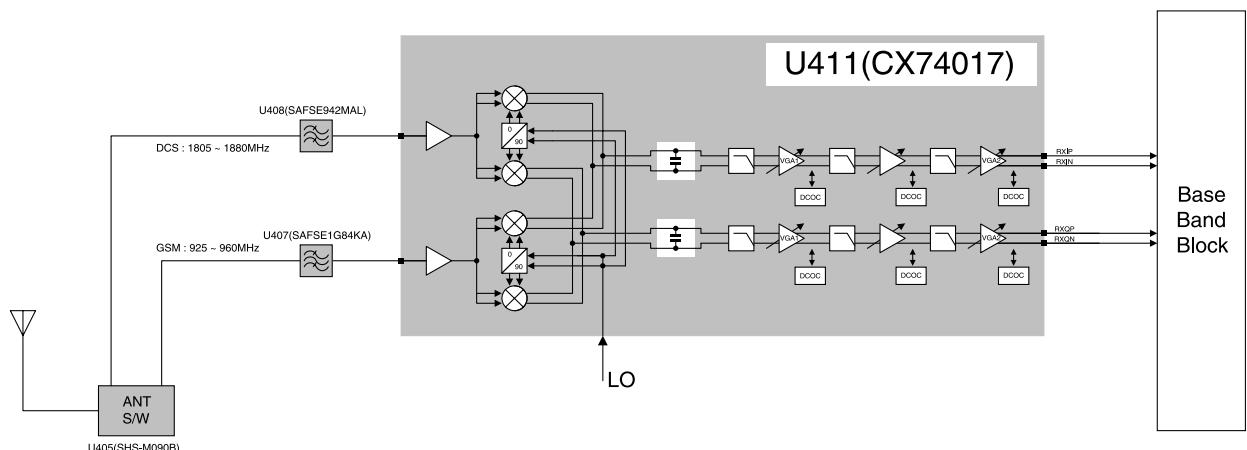

Figure 3-1. RF front-end circuit.

### 3. TECHNICAL BRIEF

---

#### A. RF front end

RF front end consists of Antenna Switch(U405), dual band LNAs integrated in transceiver(U411). The Received RF signals (GSM 925MHz ~ 960MHz, DCS 1805MHz ~ 1880MHz) are fed into the antenna or mobile switch. An antenna matching circuit is between the antenna and the mobile switch.

The Antenna Switch (U405) is used to control the Rx and TX paths. And, the input signals VC1 and VC2 of a U405 are connected to 2-Input AND Gates(U401) to switch either TX or RX path on. When the RX path is turned on, the received RF signal then feeds either Rx\_900\_RF or RX\_1800\_RF path selected by GSM-RX and DCS-RX respectively. This Rx\_900\_RF path contains one SAW filter, followed after the Antenna Switch (U405), to filter any unwanted signal apart from the DCS RX band. And, the RX\_1800\_RF path is the same case.

The logic and current for Antenna Switch is given below Table 3-1.

**Table 3-1. The logic and current**

	VC1	VC2	Current
GSM TX	0 V	2.7 V	10.0 mA max
DCS TX	2.7 V	0 V	10.0 mA max
GSM/DCS RX	0 V	0 V	< 0.1 mA

These two paths are then connected to the LNAGSMN (#11) and LNADCSIN (#13) of CX74017 (U411), respectively. A low-noise bipolar RF amplifier, contained within the U411, amplifies the RF signal. The RF signals from the front-end pass to the receiver mixers within the U411 device.

#### B. Demodulator and baseband processing

In direct conversion receiver there is only one mixer down-converting received RF signal to BB signal directly. The gain down converting mixer is 40dB at high gain mode and 22dB at low gain mode.

The Rx gain setting is done in the AGC algorithm. The nominal gain of the receiver is set as a function of the expected signal strength at the antenna input so that a desired level is reached at the Rx I/Q. 7 blocks in the receiver chain have variable gains, LNA, Mixer, LPF1, VGA1, gmC Filter, Auxiliary gain control and VGA2. The gain settings can be adjustable via 3-wire bus control lines.

The baseband signals pass via integrated low-pass filters to the baseband A/D converters.

The remainder of the channel filtering is performed by the baseband chipset. The demodulator contains switches to maintain the sense of the baseband I/Q outputs with respect to the incoming RF signal on both GSM900 and DCS 1800.

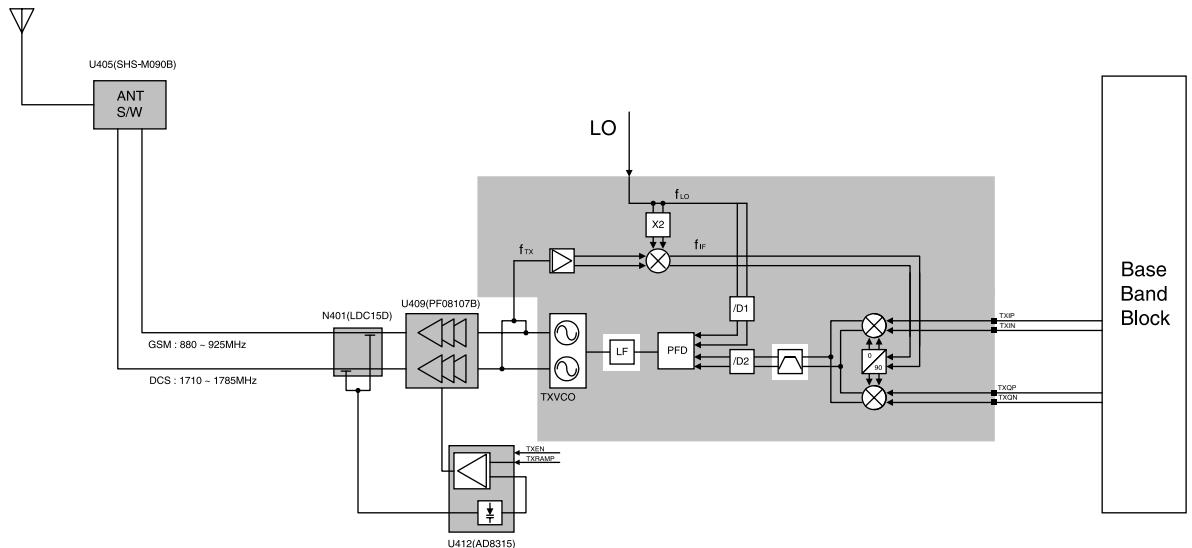

#### C. DC Offset Compensation

Three correction loops ensure that DC offsets, generated in the CX74017, do not overload the baseband chain at any point.

After compensation, the correction voltages are held on capacitors for the duration of the receive slot(s). A rising edge on the RXEN signal, selected via the serial interface, placed the DC compensation circuitry in the track mode.

### 3.3 Transmitter Part

The Transmitter part contains CX74017 active parts and PAM, APC IC, coupler and Antenna Switch. The CX74017 active part consists of a vector modulator and offset phase-locked loop block(OPLL) including down-converter, phase detector, loop filter and dual band transmit VCO which can operate at either final RF output frequency. The RF GMSK outputs from the transmit VCO are fed directly to the RF power amplifiers.

**Figure 3-2. Transmitter Block diagram**

The peak output power and the profile of the transmitted burst are controlled by means of a closed feedback loop. A dual band directional coupler is used to sample the RF output from either PA. The PA outputs from the directional coupler pass to the antenna connector via Antenna Switch.

#### A. IF Modulator

The baseband converter(BBC) within the GSM chipset generates I and Q baseband signals for the transmit vector modulator. The modulator provides more than 40dBc of carrier and unwanted side-band rejection and produces a GMSK modulated signal. The baseband software is able to cancel out differential DC offsets in the I/Q baseband signals caused by imperfections in the D/A converters.

The TX-Modulator implements a quadrature modulator. The IF-frequency input signal is split into two precise orthogonal carriers, which are multiplied by the baseband modulation signal IT/ITX and QT/QTX. It is used as reference signal for the OPLL.

### 3. TECHNICAL BRIEF

---

#### B. OPLL

The offset mixer down converts the feedback Tx RF signal using LO to generate a IF modulating signal. The IF signal goes via external passive bandpass filter to one port of the phase detector.

The other side of the phase detector input is LO signal. The phase detector generates an error current proportional to the phase difference between the modulated signal from the offset mixer and the reference signal from the LO.

The error current is filtered by a second order low-pass filter to generate an output voltage which depends on the GMSK modulation and the desired channel frequency. This voltage controls the transmit VCO such that the VCO output signal, centered on the correct RF channel, is frequency modulated with the original GMSK data. The OPLL acts as a tracking narrowband band pass filter tuned to the desired channel frequency. This reduces the wideband noise floor of the modulation and up-conversion process and provides significant filtering of spurious products.

#### C. Synthesizer

The CX74017 includes a fully integrated UHF VCO with an on-chip LC tank.

A single sigma-delta fractional-N synthesizer can phase lock the local oscillator used in both transmit and receive path to a precision frequency reference input. Fractional-N operation offers low phase noise and fast setting times, allowing for multiple slot applications such as GPRS.

The generated frequency is given by the following equation

$$f_{VCO} = \frac{\left(N + 3.5 + \frac{FN}{2^{22}}\right) f_{ref}}{R}$$

where :  $f_{VCO}$  = Generated VCO frequency

N = N-divider ratio integer part

FN = Fractional setting

R = R-divider ratio

$f_{VCO}$  = Reference Frequency

The counter and mode settings of the synthesizer are also programmed via 3-wire interface.

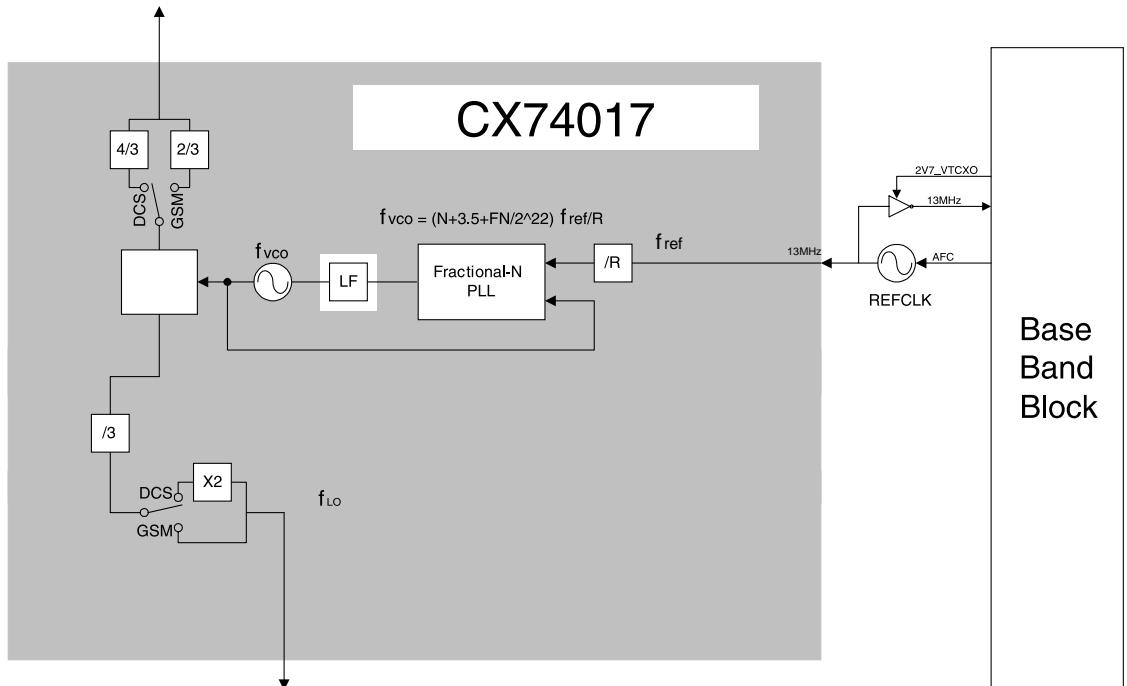

Figure 3-3. Synthesizer Block diagram

## D. TX APC Part

The AD8315[U412] is a dual band RF power controller for RF power amplifiers operating in the 850MHz to 2GHz range.

The AD8315[U412] controls the power output of the selected RF channel. RF power is controlled by driving the RF amplifier power control pins and sensing the resultant RF output power via a directional coupler. The RF sense voltage is peak detected using an on-chip Schottky diode.

This detected voltage is compared to the DAC voltage at the VSET pin to control the output power.

An internal input signal[TXRAMP] is applied to the positive input of the AD8315 amplifier during the TXEN mode and a directional coupler near the antenna feeds a portion of the RF output signal back to the AD8315 peak detector converts this signal to a low frequency feedback signal that balances the amplifier when this signal equals the RAMP input signal level.

## E. Power Amplifier

The PF08107B[U409] is Dual band amplifier for E-GSM(880 to 915MHz) and DCS1800(1710 to 1785MHz). The efficiency of module is the 50% at nominal output power for E-GSM and the 43% at 32dBm for DCS1800. This module should be operated under the GSM burst pulse. To avoid permanent degradation, CW operation should not be applied. To avoid the oscillation at no input power, before the input is cut off, the control voltage Vapc should be control to less than 0.5V.

We have to improve thermal resistance, the through holes should be layouted as many as possible on PCB under the module. And to get good stability, all the GND terminals and the metal cap should be soldered to ground plane of PCB.

#### 3.4 13 MHz Clock

The 13 MHz clock (VC-TCXO-208C) consists of a TCXO (Temperature Compensated Crystal Oscillator) which oscillates at a frequency of 13 MHz.

It is used within the CX74017 RF Main Chip, BB Analog chip-set (AD6521), and Digital (AD6522).

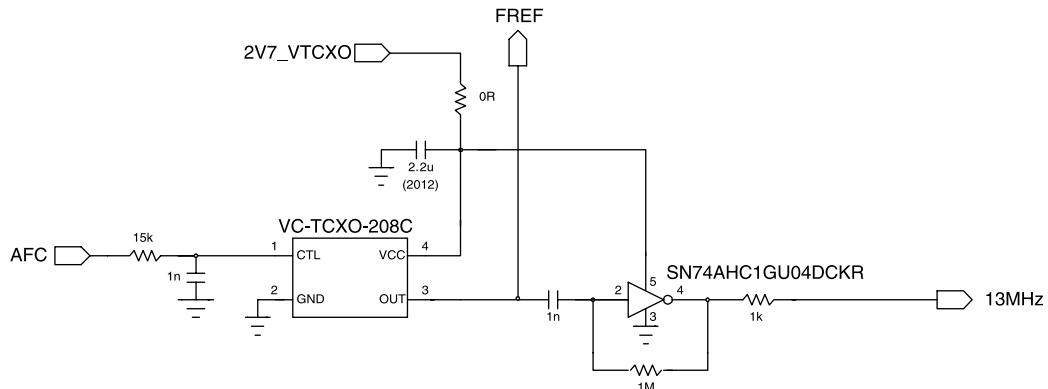

Figure 3-4. VCTCXO Circuit.

#### 3.5 Power Supplies and Control Signals

There are two regulators used in the phone to provide RF power. One is contained inside of ADP3408 (U101), power management IC to provide the power for the VCTCXO (X302). The other is used to provide the power for remaining RF circuits.

Table 3-2.

Regulator	Voltage	Powers	Enable Signal
Regulator 1 (U1, 2V7_VTCXO)	2.7 V $\pm$ 0.5 V	VCTCXO	
Regulator 2 (U414, RF2V8)	2.85 V $\pm$ 0.5 V	RF circuitry	VSYNTHEN

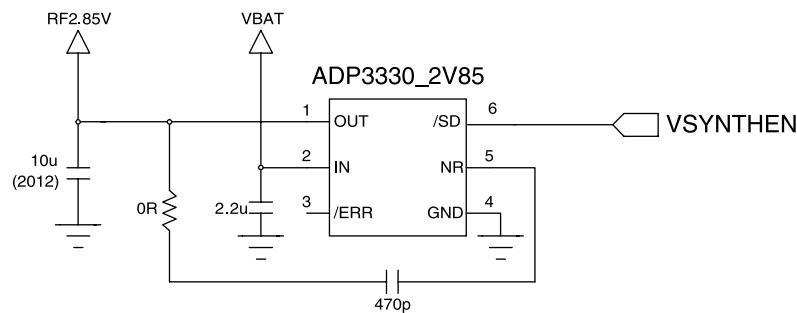

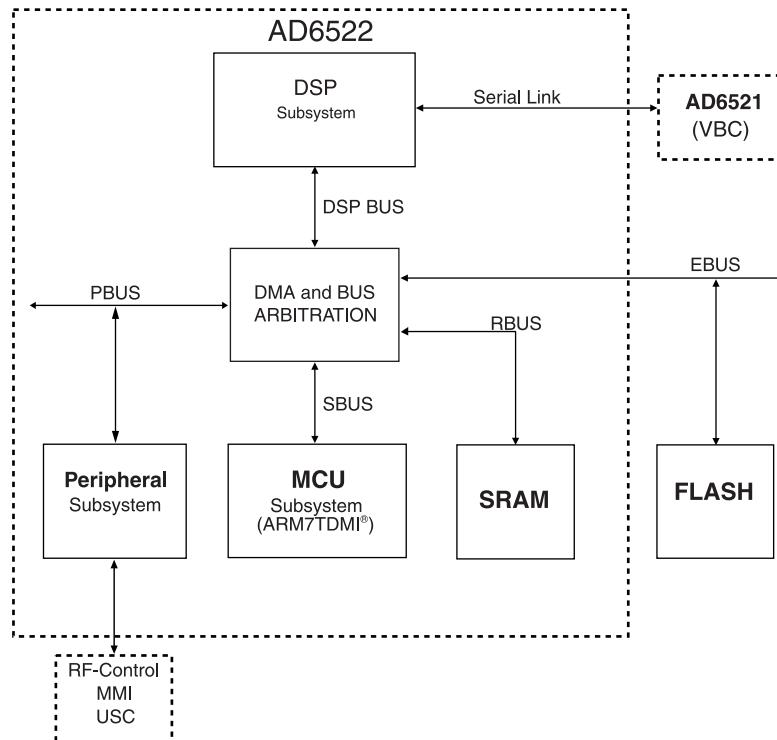

Figure 3-5. Regulator Circuit.

### 3.6 Digital Main Processor

The AD6522 is an ADI designed processor.

**Figure 3-6. Top level block diagram of the AD6522 internal architecture.**

#### BUS Arbitration Subsystem

It is to work as a cross point for data accesses between the three main busses. EBUS is for external accesses, primarily from Flash memory for code and data. RBUS is for internal RAM access. PBUS is for access to internal peripheral modules such as UART, RTC or SIM. In addition to the three main system busses, it has SBUS, IOBUS and DMABUS.

#### DSP subsystem

It consists of ADI DSP, Viterbi coprocessor, Ciphering unit and a cache memory/controller system. The DSP can run at a maximum clock frequency of 78 MHz at 2.45 V. The Viterbi and ciphering accelerators enable a very efficient implementation of the channel equalization, encryption and decryption tasks.

### **3. TECHNICAL BRIEF**

---

#### **MCU subsystem**

It consists of an ARM7TDMI central processing unit, a boot ROM, a clock generation and access control module.

The maximum clock frequency for the ARM7TDMI is 39 MHz at 2.45 V.

The main clock is 13MHz and it is provided by VCTCXO. The Clock & BS(Bus Select) generator make internal clock by multiplying the main clock by 1X, 1.5X, 2X and 3X.

The boot ROM contains MCU code for basic communication between the ARM and one of the serial ports in the Universal System Connector subsystem.

#### **Peripheral subsystem**

It contains four major groups of elements.

The MMI group is a collection of all the functionality that are needed to implement a complete user interface including keyboard, display, backlight, RTC, general purpose I/O etc.

House Keeping group consists of three different sub-modules: The Watch Dog Timer, the Interrupt Controller, and the general timers.

GSM system group consists of the time base generation together with the synthesizer interface, which form the radio control.

Direct Memory Access is located between the three system buses (PBUS, RBUS and EBUS) and can move any data from any address location on one system bus to any address location on another system bus.

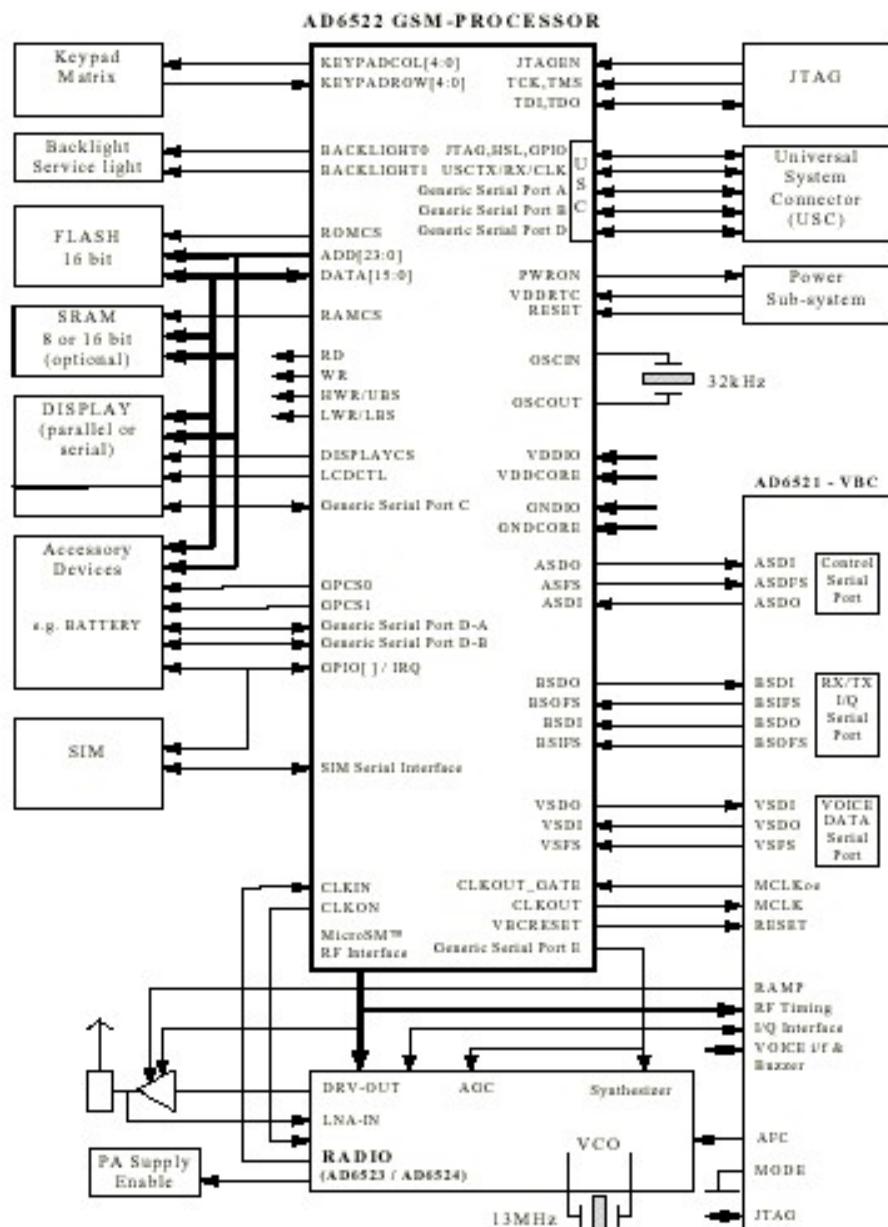

Figure 3-7. System interconnection of AD6522 external interfaces

### 3. TECHNICAL BRIEF

---

Interconnection with external devices

#### RTC block interface

Countered by external X-TAL

The X-TAL oscillates 32.768KHz

#### LCD module interface

Controlled by LCD\_MAIN/SUB\_CS, LCD\_RES, LCD\_A0, /WR, /RD, DATA [00...07] ports

**Table 3-3.**

	Description
LCD_MAIN_CS LCD_SUB_CS	LCD chip enable. Each LCD has CS pin
LCD_RES	This pin resets LCD module.
LCD_A0	This pin determines whether the data to LCD module is display data or control data
/WR, /RD	Read/Write control
DATA [00...07]	Parallel data line

#### RF interface

The AD6522 control RF parts through TXEN, RXON1, RXON2, AGCEN, SDATA, SCLK, SEN etc.

**Table 3-4.**

Signal Name	Description
TXEN	TX Enable/Disable
RXON1	LNA, Mixer1 On/Off
RXON2	Mixer 2 On/Off
AGCEN	AGC Enable/Disable
SDATA	Serial Data to PLL
SCLK	Clock to PLL
SEN	PLL Enable/Disable

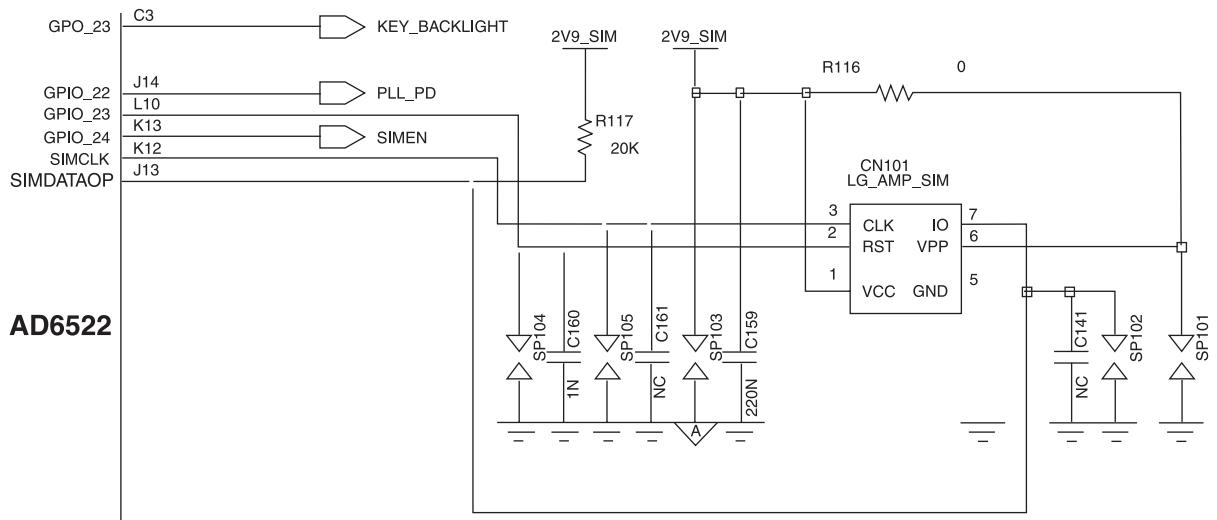

**SIM interface**

The AD6522 check status periodically in call mode if SIM card is inserted or not, but the AD6522 don't check in deep sleep mode.

Interface by SIM\_IO, SIM\_CLK, SIM\_RST

**Table 3-5.**

	<b>Description</b>
SIM_IO	This pin receives and sends data to SIM card. G5200 support only 3.0 volt interface SIM card.
SIM_CLK	Clock 3.5MHz frequency.
SIM_RST	Reset SIM block.

**Figure 3-8.****Key interface**

Include 5 column and 5 row

The AD6522 detect key press by interrupt

**ADP3408 interrupt**

There are two interrupts EOC and CHARGEDECTECT

EOC: End of Charge. Charging would be stopped when AD6522 receive this input.

CHARGEDECTECT: This interrupt is generated when charge is inserted.

## 3.7 Analog Main Processor

AD6521

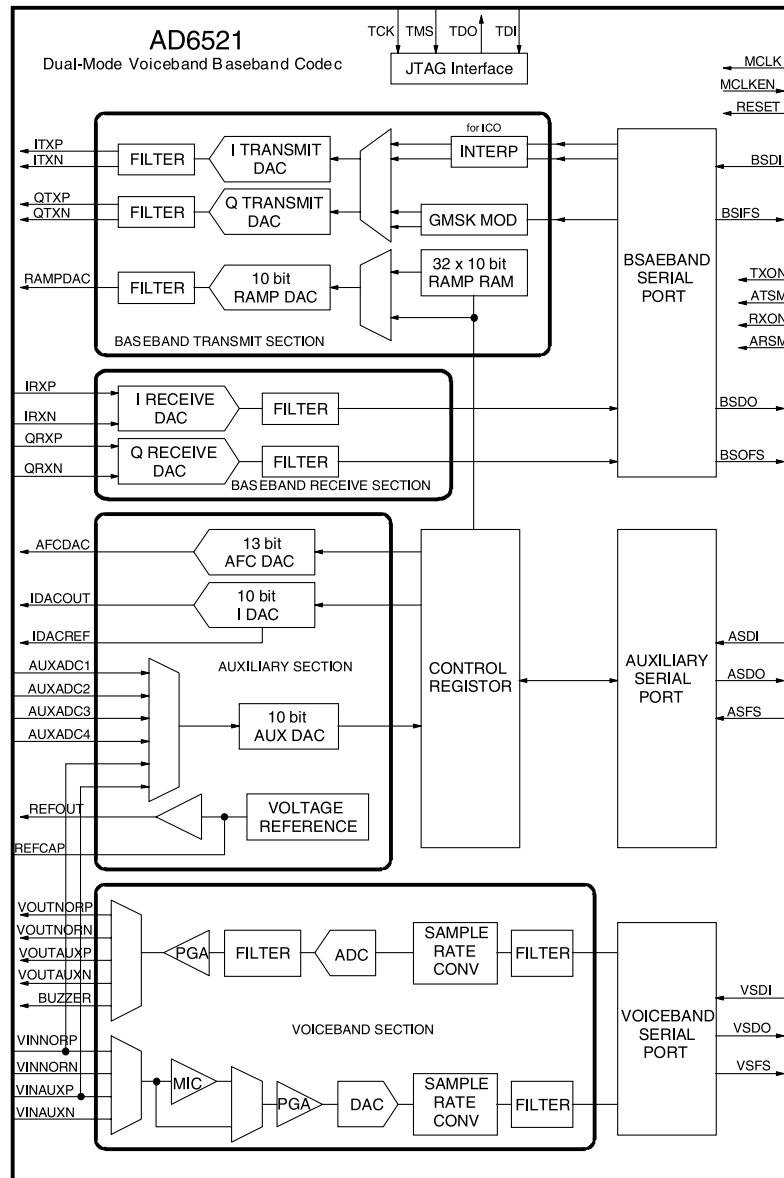

Figure 3-9. AD6521 function block diagram

#### **BB Transmit section**

This section generates in-phase and quadrature BB modulated GMSK signals (BT = 0.3) in accordance with GSM 05.05 Phase 2 specifications

The transmit channel consists of a digital GMSK modulator, a matched pair of 10-bit DACs and a matched pair of reconstruction filter

#### **BB Receive section**

This section consists of two identical ADC channels that process baseband in-phase(I) and quadrature(Q) input signals.

Each channel consists of a coarse switched capacitor input filter, followed by a high-order sigma-delta modulator and a lowpass digital filter

#### **Auxiliary section**

This section contains two auxiliary DACs(AFC DAC, IDAC) for system control.

This section also contains AUX ADC and Voltage Reference

AUX ADC: 6 channel 10 bits

AFC DAC: 13 bits

IDAC: 10 bits

#### **Voiceband section**

Receive audio signal from MIC. G5200 use differential configuration.

Send audio signal to Receiver. G5200 use differential configuration.

It interconnect with external device like main microphone, main receiver, ear-phone and Hands free kit

through the VINNORP, VINNORN, VOUTNORP, VOUTNORN, VINAUXP, VINAUXN,  
VOUTAUXP, VOUTAUXN

VINNORP, VINNORN: Main MIC positive/negative terminal.

VOUTNORP, VOUTNORN: Main Receiver positive/negative terminal.

VINAUXP, VINAUXN: Hands free kit mic positive/negative terminal.

VOUTAUXP, VOUTAUXON: Hands free kit speaker positive/negative terminal.

## 3.8 Power Management

### ADP3408

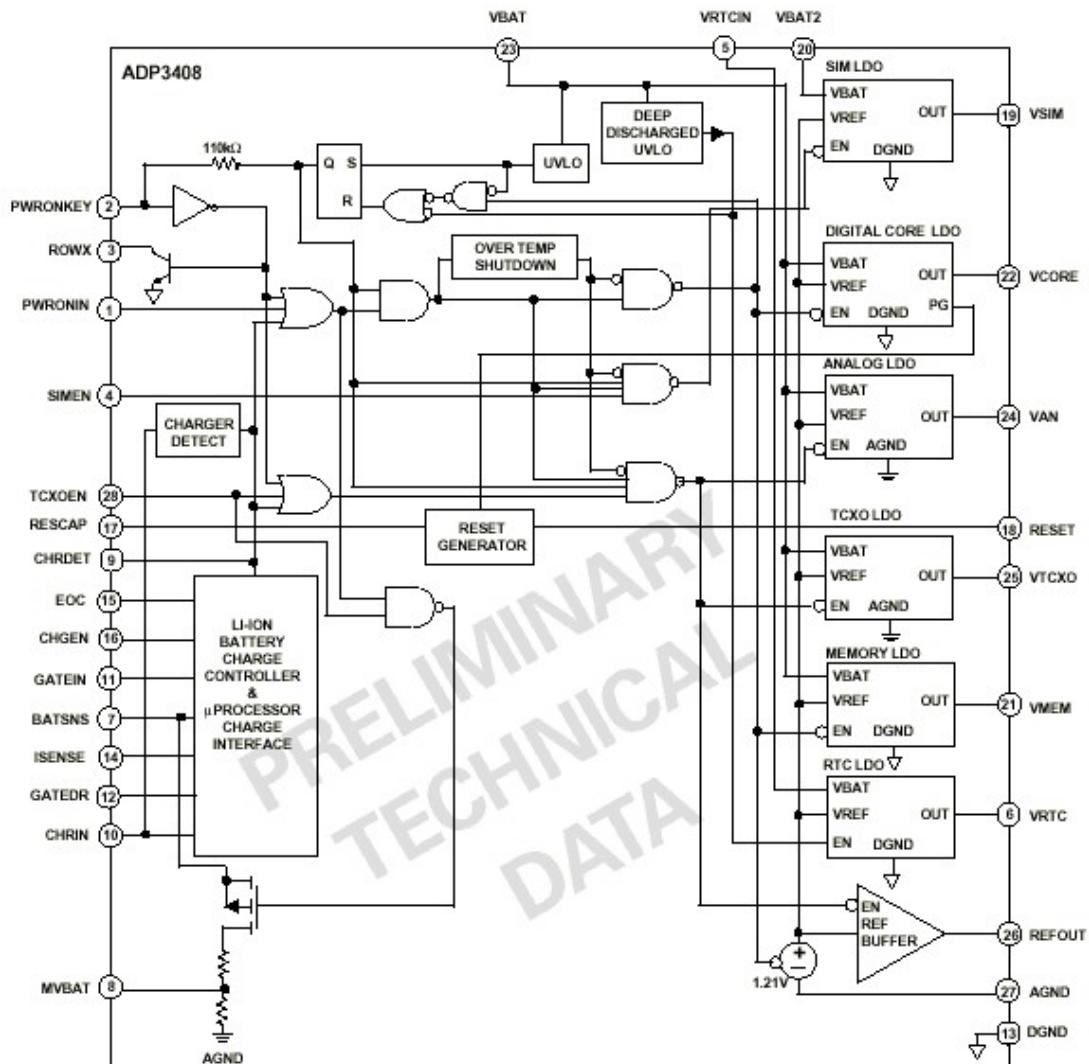

Figure 3-10. ADP3408 inner block diagram.

#### Power up sequence logic

The ADP3408 controls power on sequence

#### Power on sequence

If a battery is inserted, the battery powers the 6 LDOs.

Then if PWRONKEY is detected, the LDOs output turn on.

REFOUT is also enabled

Reset is generated and send to the AD6522

**LDO block**

There are 6 LDOs in the ADP3408

**Table 3-6.**

	Description
VSIM	2.86 V (is provided to SIM card)
VCORE	2.45 V (is provided to the AD6522 & AD6521's digital core)
VRTC	2.45 V (is provided to the RTC and Backup Battery)
VAN	2.45 V (is provided to the AD6521 I/O and used as microphone bias)
VTCXO	2.715 V (is provided to VTCXO)
VMEM	2.80 V (is provided to Flash)

**Battery charging block**

It can be used to charge Lithium Ion and/or Nickel Metal Hydride batteries. G5200 use Li-Ion battery only. Charger initialization, trickle charging, and Li-Ion charging control are implemented in hardware.

**Charging Process**

Check charger is inserted or not

If ADP3408 detects that Charger is inserted, the CC-CV charging starts.

Exception: When battery voltage is lower than 3.2V, the precharge (low current charge mode) starts firstly.

And the battery voltage reach to 3.2V the CC-CV charging starts.

**Pins used for charging**

CHARGERDETECT: Interrupt to AD6522 when charger is plugged.

CHARGEEN: Control signal from AD6522 to charge Li+ battery

EOC: Interrupt to AD6522 when battery is fully charged

GATEIN: Control signal from AD6522 to charge NiMH battery. But, not used.

MVBAT: Battery voltage divider. Divide ratio is 1:2.3 and it is sensed in AD6521 AUX\_ADC

**TA (Travel Adaptor)**

Input voltage: AC 85V ~ 260V, 50~60Hz

Output voltage: DC 5.2V ( ±0.2 V )

Output current: Max 850mA ( ±50mA )

**Battery**

Li-ion battery (Max 4.2V, Nom 4.0V)

Standard battery : Capacity - 750mAh, Li-ion

## 3.9 Memories

64M flash memory + 16M SRAM  
16 bit parallel data bus  
ADD01 ~ ADD21.  
RF Calibration data are stored in Flash

## 3.10 Display and Interface

**Table 3-7**

	Main LCD	Sub LCD
Display Format	128 x 128 dots	96 x 64 dots
Back light	EL Backlight	EL Backlight

G5200 has dual type LCD. There are the control output LCD\_MAIN/SUB\_CS which is derived from AD6522, this acts as the chip select enable for the Main/Sub LCD. AD6522 uses DATA[00:07] pins to send data for displaying graphical text onto the each LCD ( Main/Sub ).

### 3.11 Keypad Switches and Scanning

The key switches are metal domes, which make contact between two concentric pads on the keypad layer of the PCB when pressed. There are 25 switches (S301-S325), connected in a matrix of 5 rows by 5 columns, as shown in Figure, except for the power switch (S310), which is connected independently.

Functions, the row and column lines of the keypad are connected to ports of AD6522. The columns are outputs, while the rows are inputs and have pull-up resistors built in. When a key is pressed, the corresponding row and column are connected together, causing the row input to go low and generate an interrupt. The columns/rows are then scanned by AD6522 to identify the pressed key.

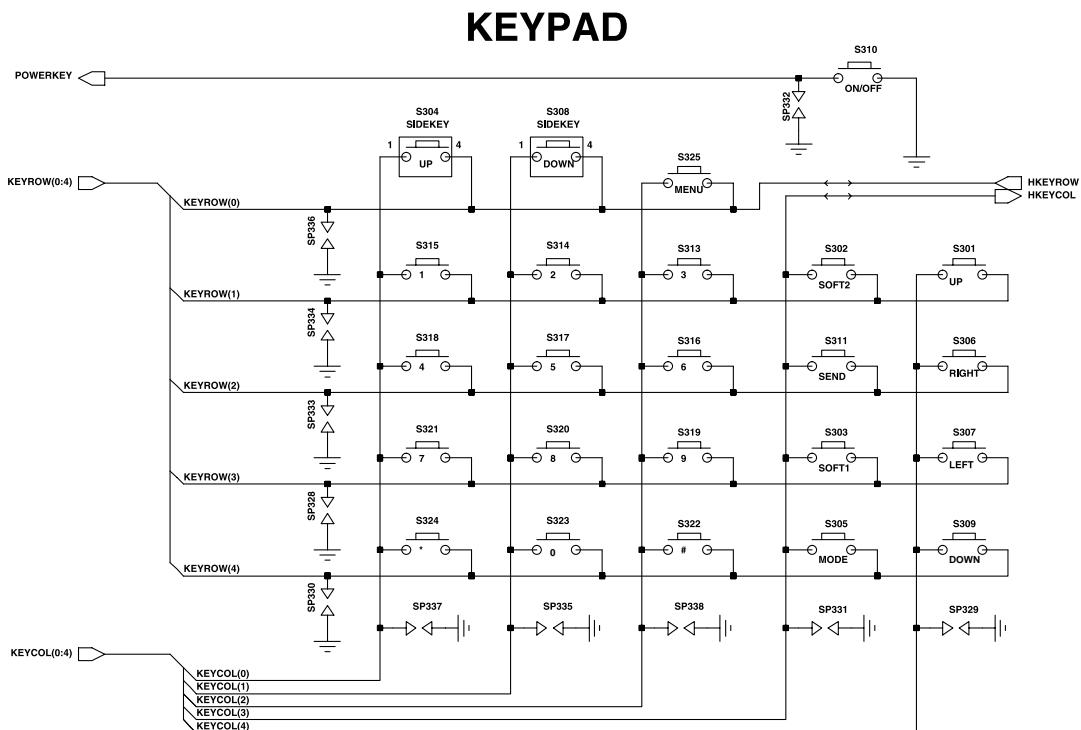

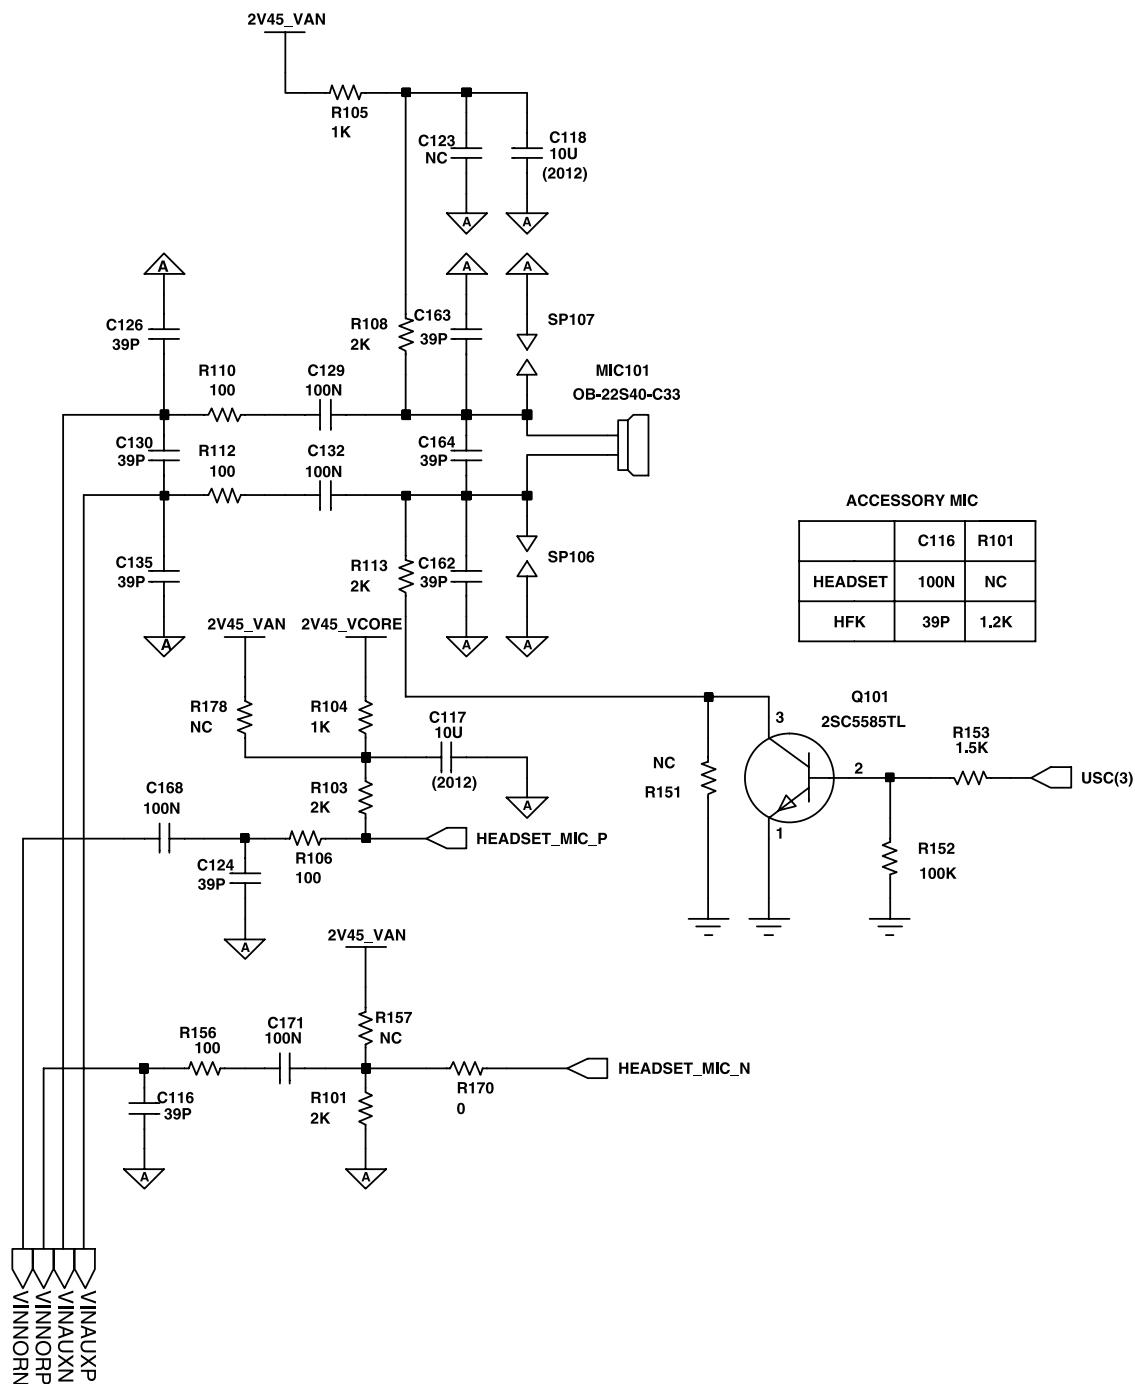

Figure 3-11. Keypad Switches and Scanning.

#### 3.12 Microphone

The microphone is soldered to the main PCB. The audio signal is passed to VINNORP (#K8) and VINNORN (#K7) pins of AD6522. The voltage supply 2V45\_VCORE is output from ADP3408, and is a bias voltage for both the VINNOR (through R105) and VINAUX (through R104) lines.

The VINNOR or VINAUX signal is then A/D converted by the Voiceband ADC part of AD6521.

The digitized speech is then passed to the DSP section of AD6522 for processing (coding, interleaving etc.).

**Figure 3-12. Microphone.**

### 3.13 Earpiece

The earpiece is driven directly from AD6521 VOUTNORP (#K8) and VOUTNORN (#K7) pins and the gain is controlled by the PGA in an AD6521. The earpiece is located in the handset folder front panel, and the signals are routed to it via FPCB connector between Main Board and FPCB board.

But, The VOUTNORP signal has to be selected by the control signal "SPK\_EN". If SPK\_EN is low, VOUTNORP is directly connected to the Earpiece, else VOUTNOTP is connected to the Midi Chip(U203).

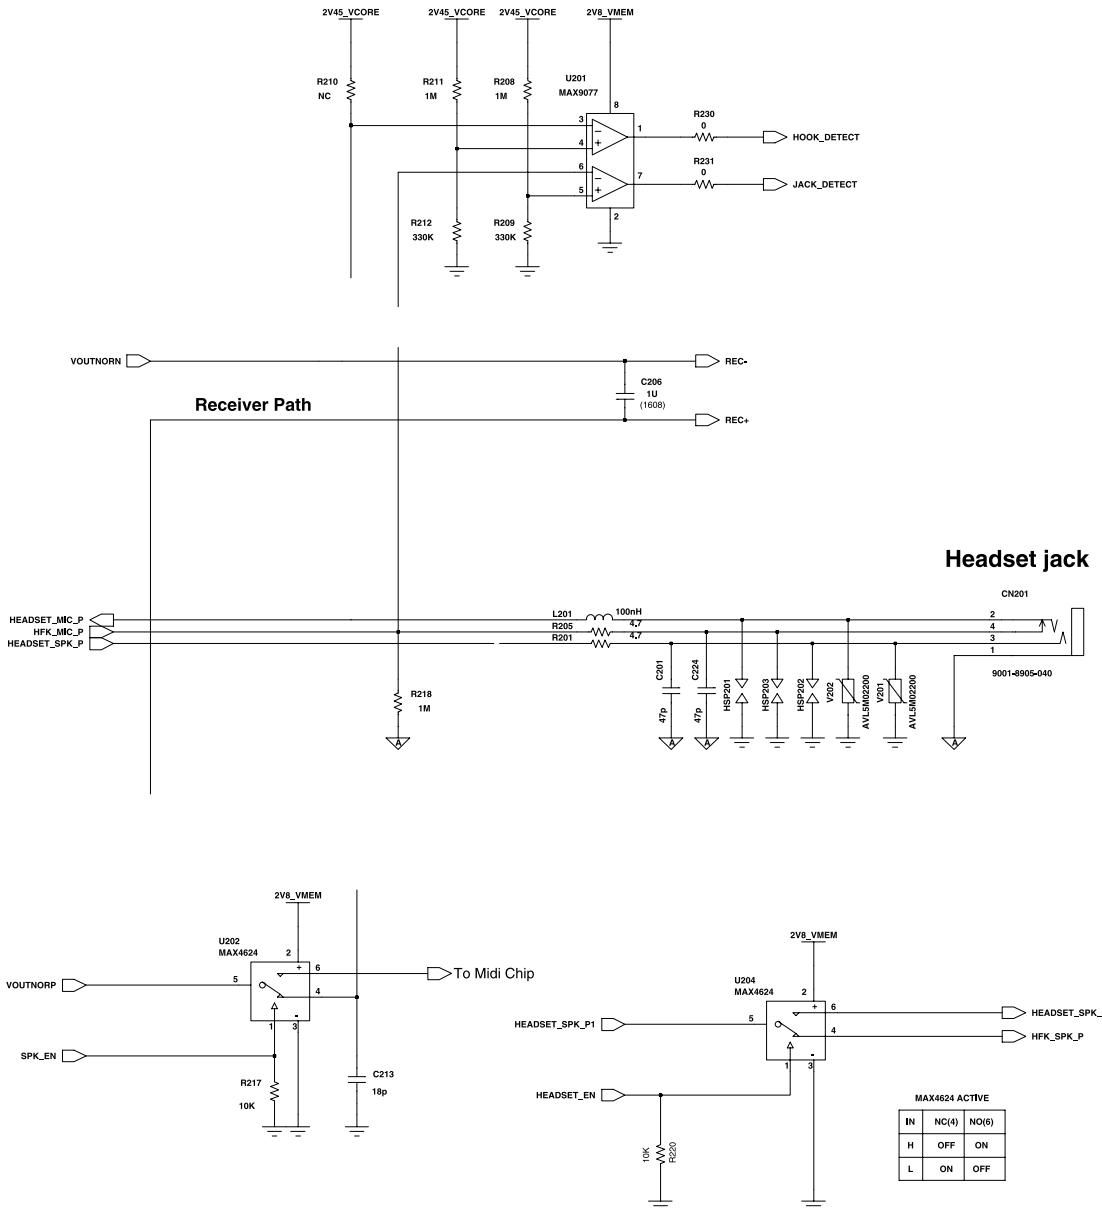

Figure 3-13. Earpiece & Handsfree Interface

## 3.14 Hands-free Interface

The audio out (VOUTAUXP & VOUTAUXN) to the hands-free kit consists of a pair of differential signals from AD6521 auxiliary outputs (#K9, #K6), which are tracked down the board to carkit connector (CN301) at the base of the handset. The DC level of the signal is supplied to the VOUTAUX pin. And the EXT\_IN signal is then input to the VINAUXP (#H10) and VINAUXN (#G10) of AD6521.

## 3.15 Headset Jack Interface

Headset Jack has the single-end structure in both audio in and out. The audio out to the headset jack is used only one line(VOUTAUXP/HEADSET\_SPK\_P1) which can be connected to the HEADSET\_MIC\_P or HFK\_SPK\_P by the analog switch(U204). If you put in the headset jack in the top of the handset, HEADSET\_SPK\_P1(VOUTAUXP) is connected to the HEADSET\_SPK\_P. And the audio in from the headset jack has also one line(VINAUXP/HEADSET\_MIC\_P). If the headset jack is put in, HEADSET\_MIC\_P is input from the MIC of headset jack, else HEADSET\_MIC\_P is connected to HFK\_MIC\_P which is input from the Hands-free Kit.

## 3.16 Key Back-light Illumination

In key back-light illumination, there are 12 Blue LEDs in Main Board, which are driven by KEY\_BACKLIGHT line from AD6522.

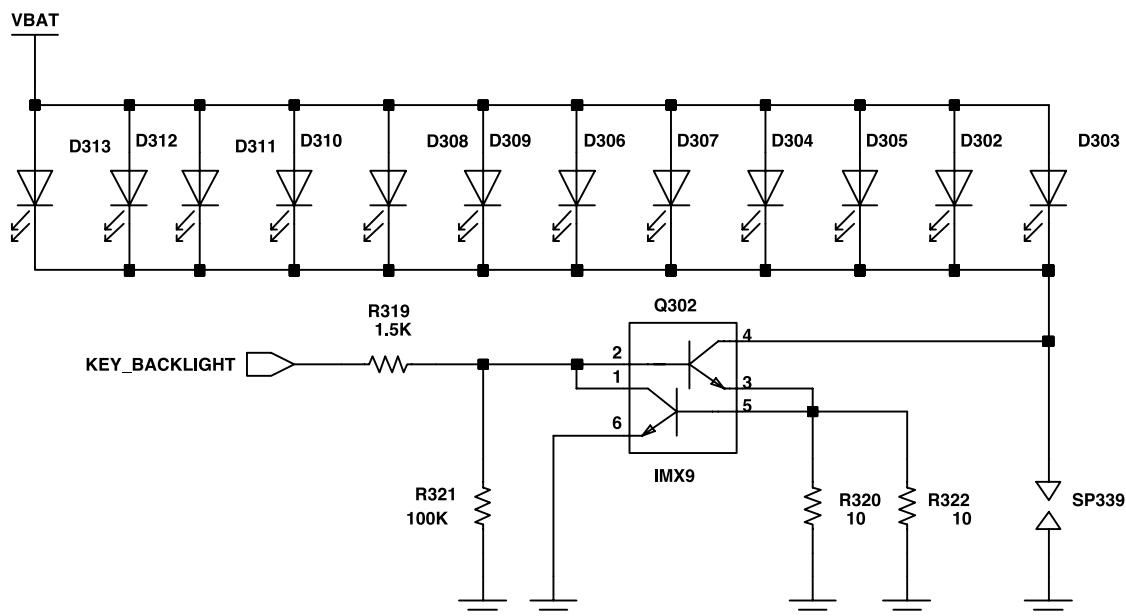

Figure 3-14. Key Back-light Illumination.

### 3.17 LCD Back-light Illumination

In LCD Back-light illumination, there is an EL driver in sub LCD side of LCD Module, which is driven by BACKLIGHT(EL\_EN) line from AD6522.

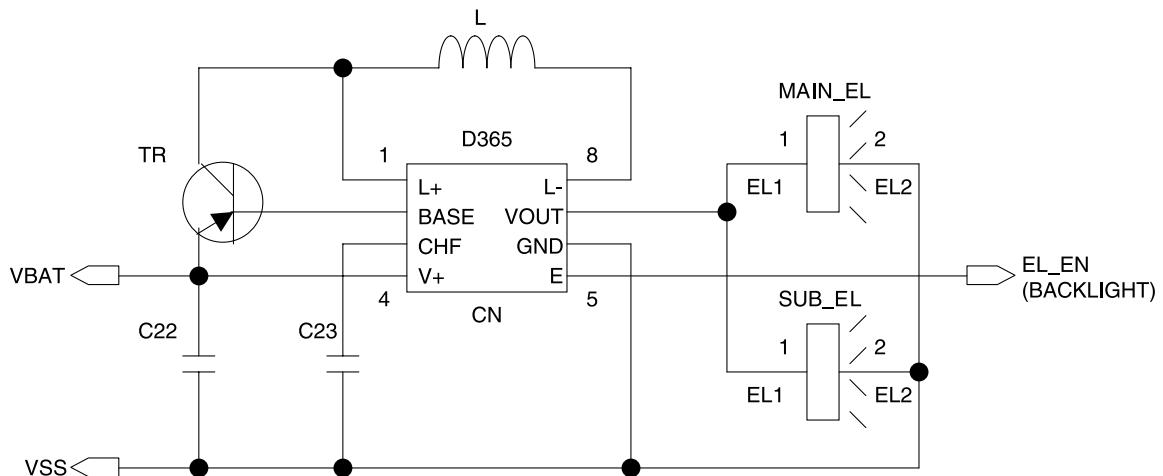

Figure 3-15. LCD Back-light Illumination.

### 3.18 Multi-Color LED Illumination

In multi-color LED illumination, there is an LED chip and three TRs in sub LCD side of LCD Module, which is driven by LED\_G, LED\_B and LED\_Main line from AD6522.

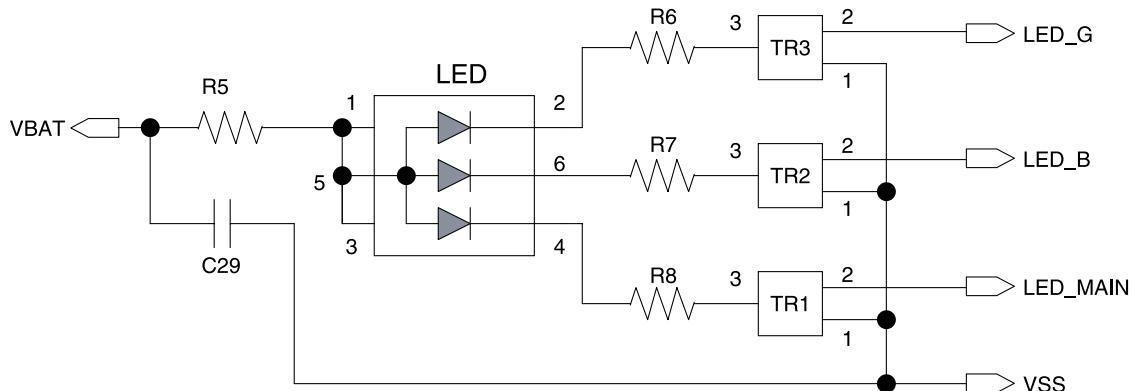

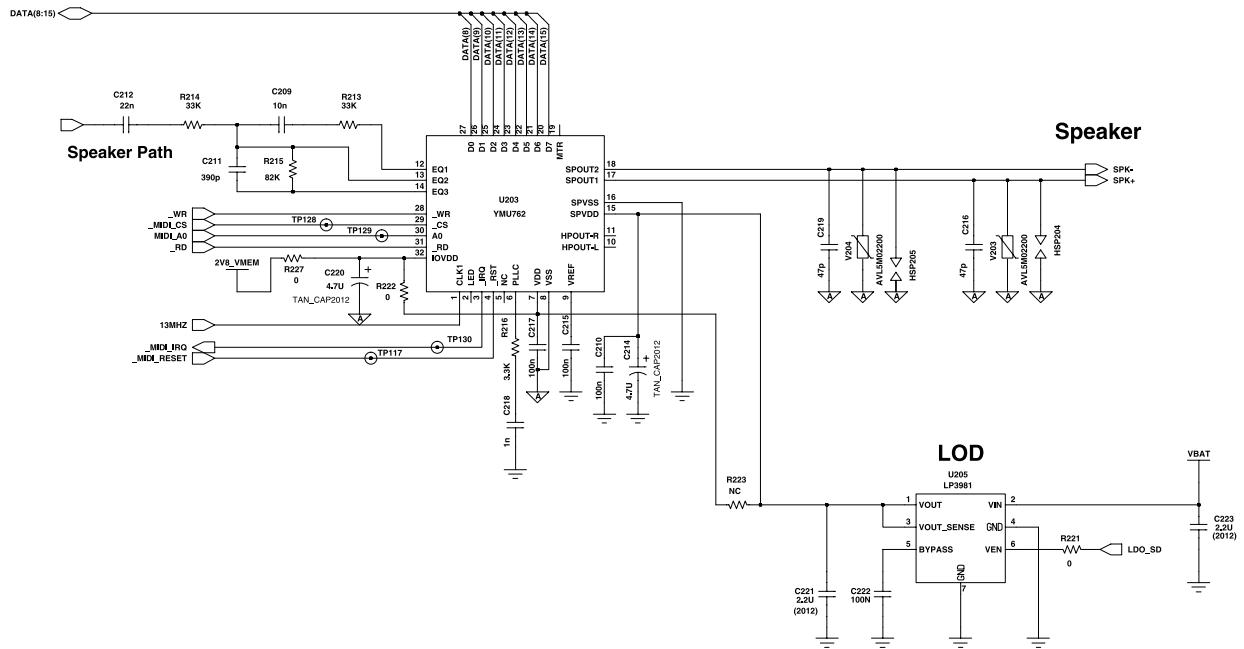

Figure 3-16. Multi-Color LED

### 3.19 Speaker & MIDI IC

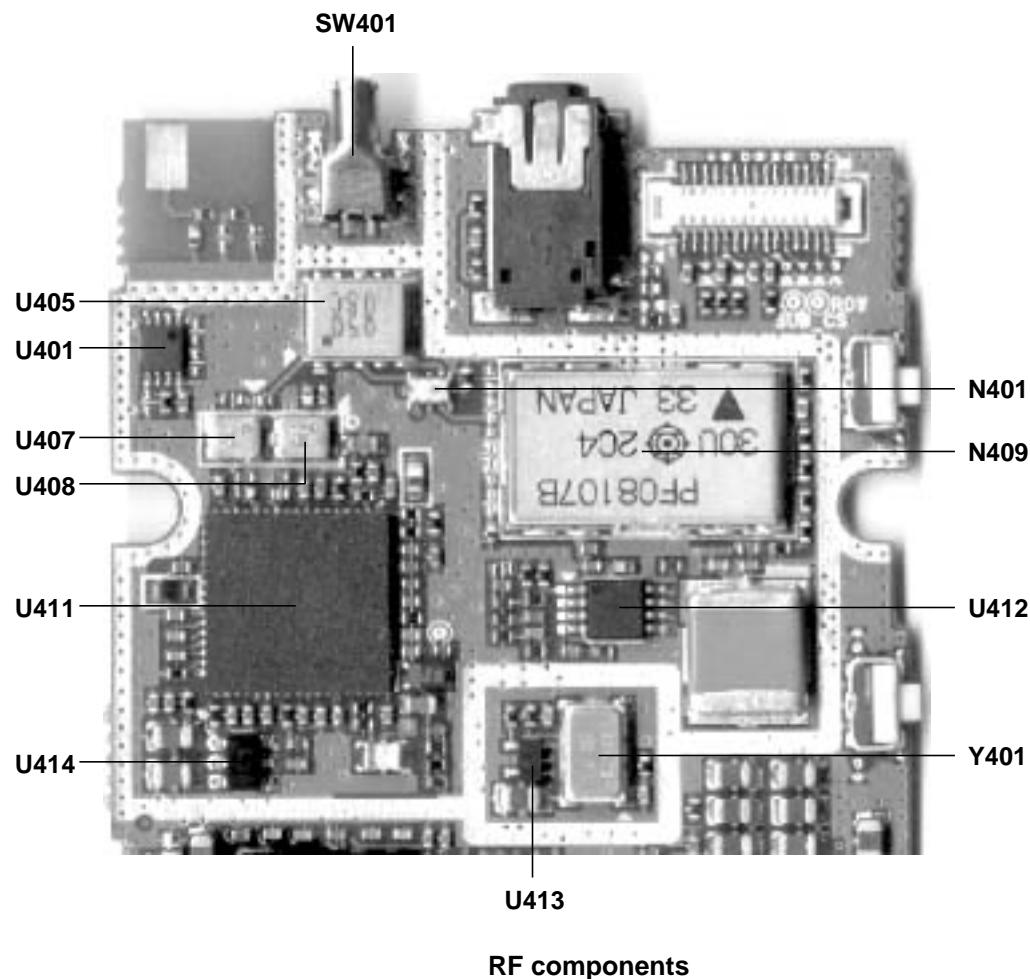

**Figure 3-17. Speaker & MIDI IC**

MA-3 is a synthesizer LSI for mobile phones that realize advanced game sounds. This LSI has a built-in speaker amplifier, and thus, is an ideal device for outputting sounds that are used by mobile phones in addition to game sounds and ringing melodies that are replayed by a synthesizer. The synthesizer section adopts "stereophonic hybrid synthesizer system" that are given advantages of both FM synthesizers and Waveform table synthesizers to allow simultaneous generation of up to thirty-two FM tones and eight Waveform table tones. Since FM synthesizer is able to present countless tones by specifying parameters with only several tens of bytes, memory capacity and communication band can be saved, and thus, the device exhibits the features in operating environment of mobile phones such as allowing distribution of arbitrary melodies with tones. On the other hand , since Waveform table synthesizer complies with downloading of tones from host CPU, arbitrary ADCM/PCM tones can be treated from sequencer in addition to the use of tones that are built-in the LSI.

MA-3 has a built-in circuit for controlling vibrator and LEDs synchronizing with play of music.

9. Remove a hinge from the folder. Then detach screw caps and screws

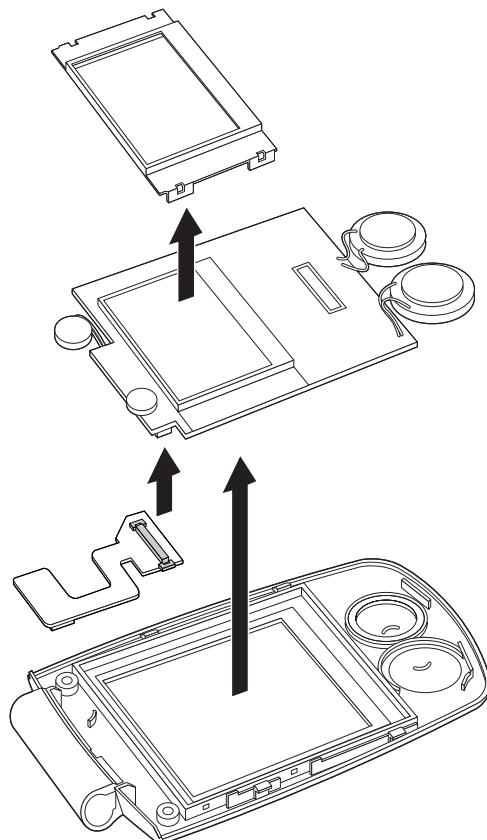

**Figure 5-9. Removing hinge and screws**

10. Place the folder on a desk. Then hold the hinge and push it down carefully.  
Finally, detach it from the rest hooks shown above.

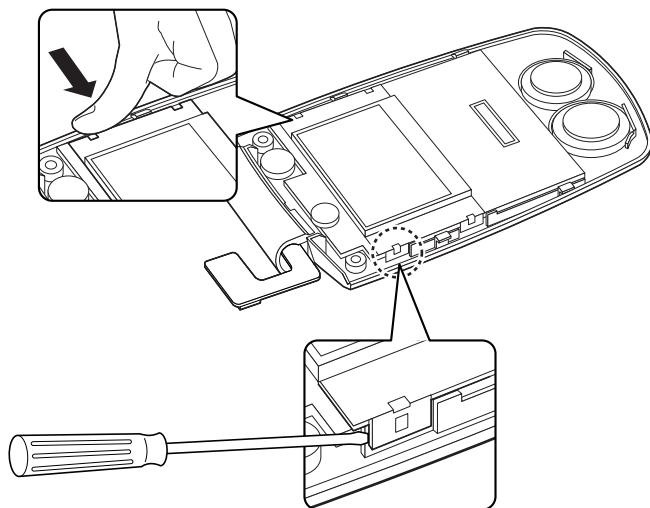

**Figure 5-10. Disassembly of Folder**

11. Detach the rest components as shown below.

**Figure 5-11. Disassembly of Rest components**

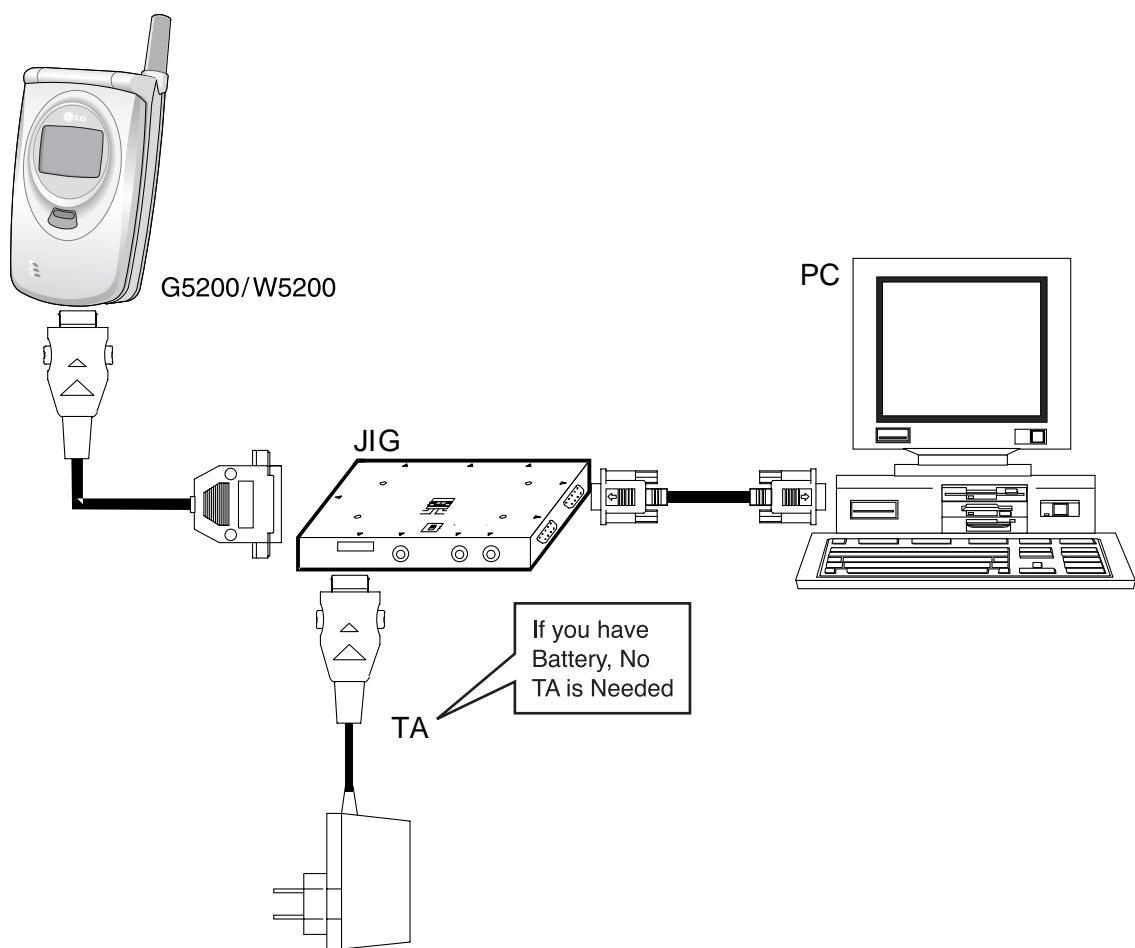

12. Use a ' - ' driver to lift up the end-side of sub-window.

**Figure 5-12. Detaching sub-window.**

## **6. DOWNLOAD**

### **6.1 Download Setup**

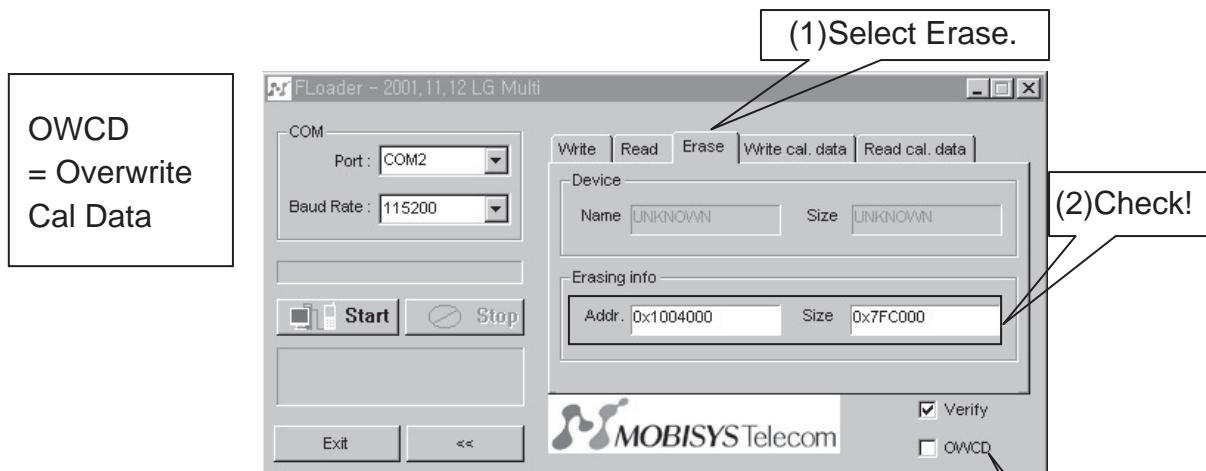

**Figure 6-1. Download Setup**

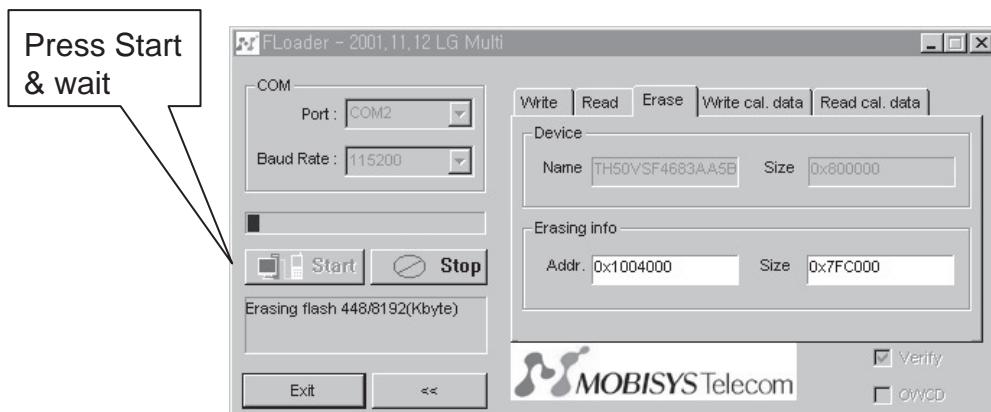

**Condition.**

- Disconnect TA to the Jig and phone have a battery
- Check the Battery up to two blocks more

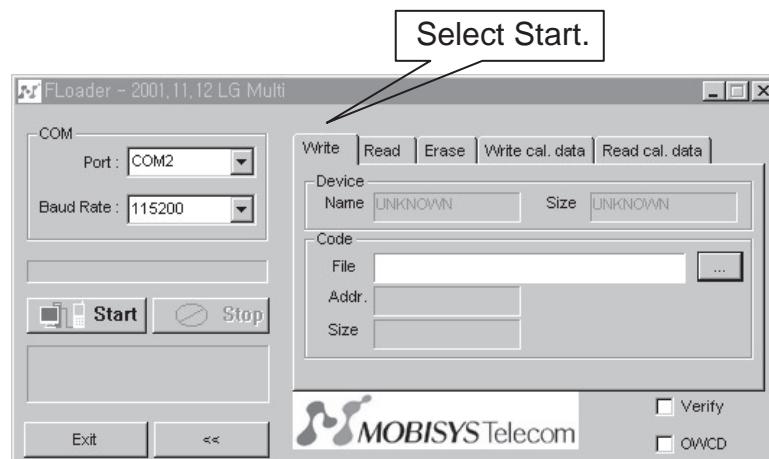

### 6.2 Download Procedure

1. Access Flash loader program in PC & Select Erase.  
(Don Check OWCD)
2. Check Address & Size (Addr. : 1004000, Size : 7FC000)

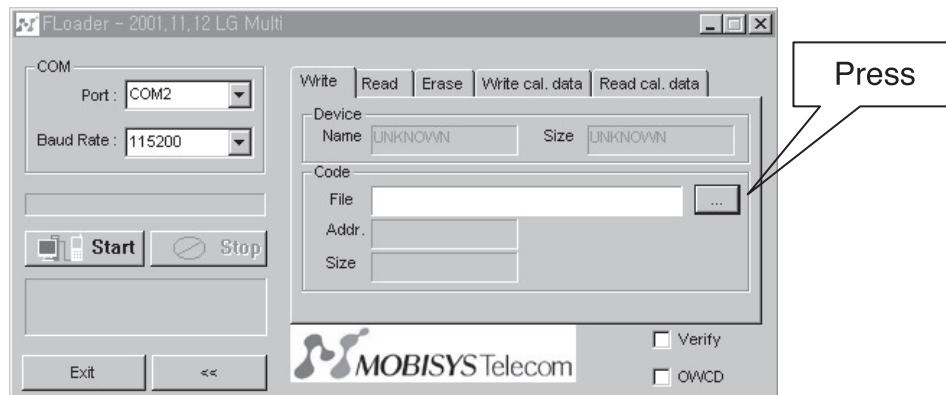

3. Press Start & Wait Until Erase Completed

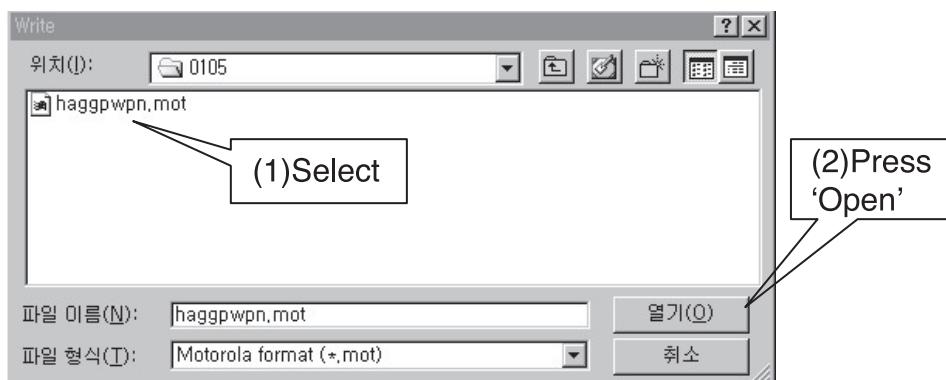

4. Press Write to start Download

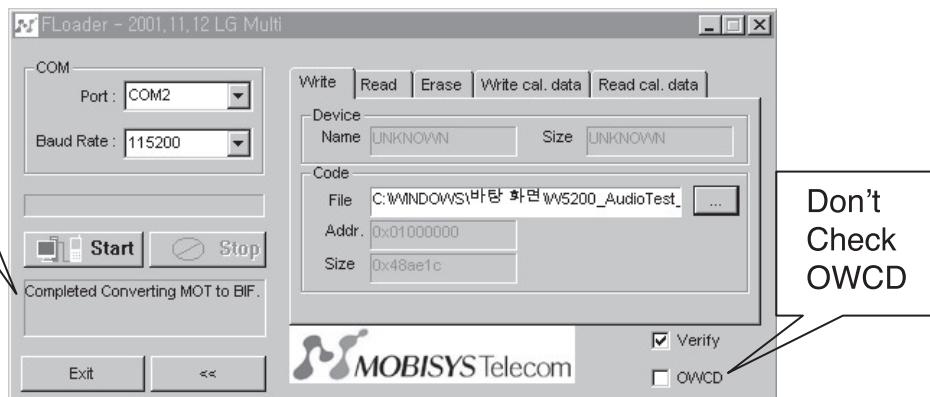

## 6. DOWNLOAD

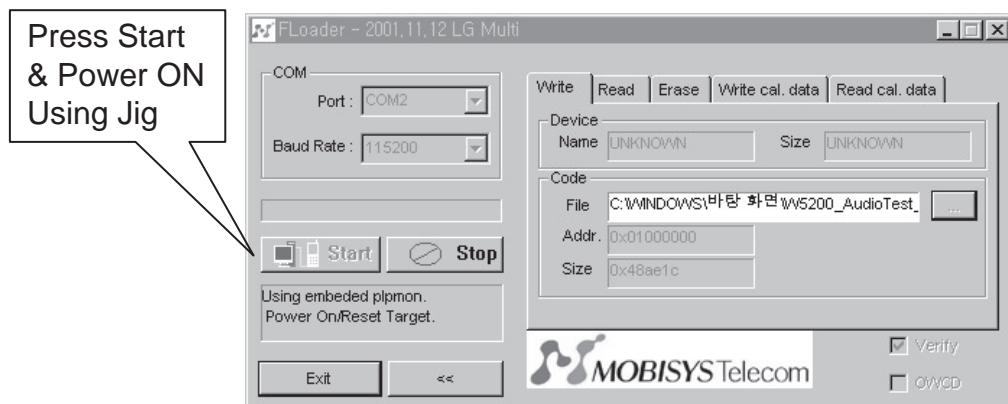

5. Select Key to Choose Mot. File

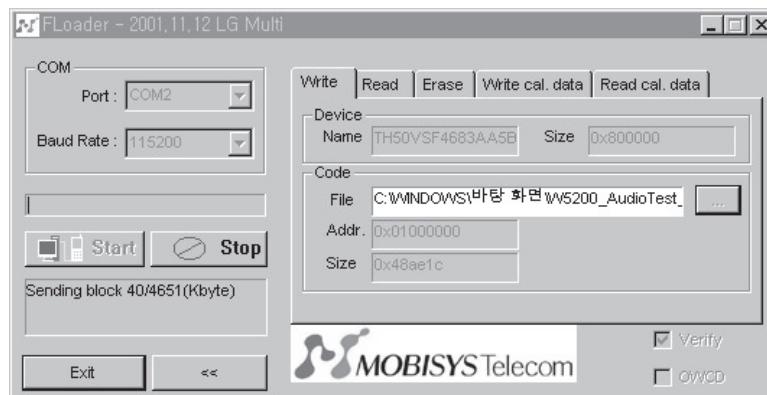

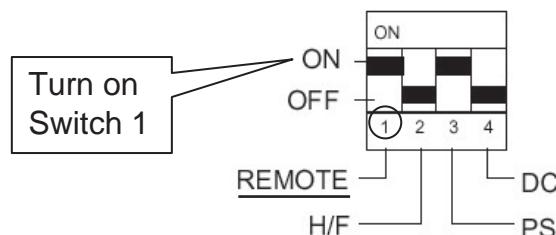

6. Select Mot. File & Press Open

7. Wait until MOT. To BIF. Converting is completed  
(Just Check Verify. Don't Check OWCD)

8. Press Start & Power on the phone Using Jig Remote Power On (Switch1)

9. Wait until Sending Block end

# 7. BLOCK DIAGRAM

## 7.1 Main Board

The G5200 is made up of two PCBs. In lower part of the folder, there is a main board. And in the upper part of the folder, there is a FPCB. Below you can see the block diagram of both PCBs.

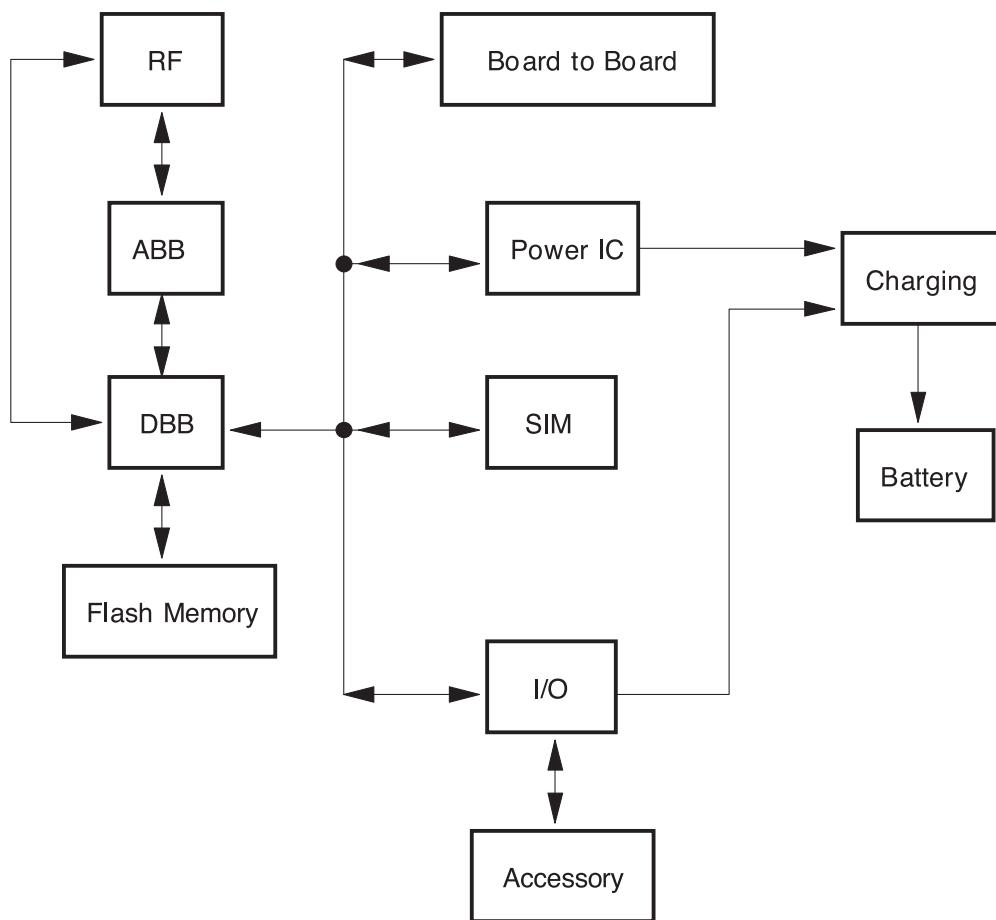

Figure 7-1. Main Blockdiagram.

## 7.2 FPCB

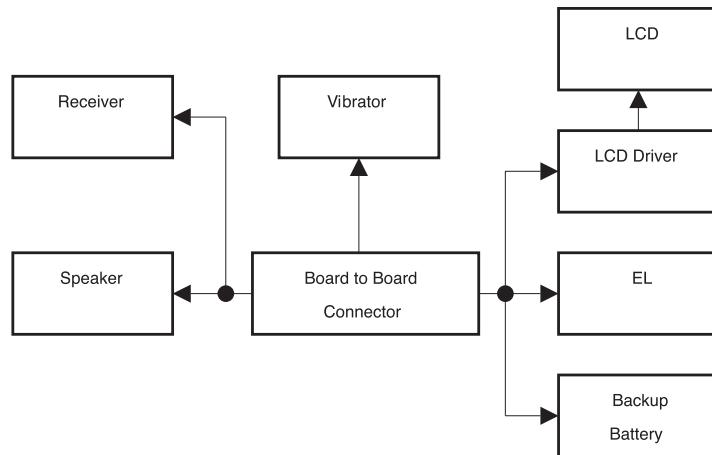

Figure 7-2. FPCB Blockdiagram.

## 7.3 RF

# **10. ENGINEERING MODE**

## **A. About Engineering Mode**

Engineering mode is designed to allow a service man/engineer to view and test the basic functions provided by a handset.

## **B. Access Codes**

The key sequence for switching the engineering mode on is 2945#\*#. Pressing END will switch back to non-engineering mode operation.

## **C. Key Operation**

Use Up and Down key to select a menu and press 'select' key to progress the test. Pressing 'back' key will switch back to the original test menu.

### **10.1 BB Test [MENU 1]**

Baseband Test

#### **A. LED [1-1]**

This menu is to test the indicator LED on the folder of a handset.

- **Red [1-1-1]** : Red light turns on
- **Blue [1-1-2]** : Blue light turns on
- **Yellow [1-1-3]** : Yellow light turns on
- **Orange [1-1-4]** : Orange light turns on
- **Pink [1-1-5]** : Pink light turns on
- **Green [1-1-6]** : Green turns on
- **Violet [1-1-7]** : Violet light turns on

#### **B. LCD [1-2]**

This menu is to test the LCD contrast.

- **Contrast Value [1-2-1]** : Change this value by up and down key.

### C. Backlight [1-3]

This menu is to test the LCD Backlight and Keypad Backlight.

- **Backlight On [1-3-1]** : LCD Backlight and Keypad Backlight light on at the same time.
- **Backlight Off [1-3-2]** : LCD Backlight and Keypad Backlight light off at the same time.
- **Backlight value [1-3-3]** : This controls brightness of Backlight. When entering into the

menu, the present backlight-value in the phone is displayed. Use Left/Right key to adjust the level of brightness. The value of the brightness set at last will be saved in the NVRAM.

### D. Buzzer [1-4]

This menu is to test the melody sound.

- **Melody on [1-4-1]** : Melody sound is played through the speaker.
- **Melody off [1-4-1]** : Melody sound is off.

### E. Vibrator [1-5]

This menu is to test the vibration mode.

- **Vibrator On [1-5-1]** : Vibration mode is on.
- **Vibrator Off [1-5-2]** : Vibration mode is off.

### F. ADC (Analog to Digital Converter) [1-6]

This displays the value of each ADC.

- **MVBAT ADC (Main Voltage Battery ADC) [1-6-1]**
- **AUX ADC (Auxiliary ADC) [1-6-2]**
- **TEMPER ADC(Temperature ADC) [1-6-3]**

### G. BATTERY [1-7]

- **Bat Cal [1-7-1] :**

This displays the value of Battery Calibration.

The following menus are displayed in order;

BATLEV\_4V,BATLEV\_3\_LIMIT,BATLEV\_2\_LIMIT,BATLEV\_1\_LIMIT,BAT\_IDLE\_LI MIT,  
BAT\_INCALL\_LIMIT,SHUT\_DOWN\_VOLTAGE,BAT\_RECHARGE\_LMT

- **TEMP Cal [1-7-2] :**

This displays the value of Temperature Calibration.

The following menus are displayed in order; TEMP\_HIGH\_LIMIT,  
TEMP\_HIGH\_RECHARGE\_LMT, TEMP\_LOW\_RECHARGE\_LMT, TEMP\_LOW\_LIMIT

## **H. Audio [1-8]**

This is a menu for setting the control register of Voiceband Baseband Codec chip.

Although the actual value can be written over, it returns to default value after switching off and on the phone.

- **VbControl1 [1-8-1]** : VbControl1 bit Register Value Setting
- **VbControl2 [1-8-2]** : VbControl2 bit Register Value Setting
- **VbControl3 [1-8-3]** : VbControl3 bit Register Value Setting
- **VbControl4 [1-8-4]** : VbControl4 bit Register Value Setting
- **VbControl5 [1-8-5]** : VbControl5 bit Register Value Setting
- **VbControl6 [1-8-6]** : VbControl6 bit Register Value Setting

## **I. DAI (Digital Audio Interface) [1-9]**

This menu is to set the Digital Audio Interface Mode for Speech Transcoder and Acoustic testing.

- **DAI AUDIO [1-9-1]** : DAI audio mode
- **DAI UPLINK [1-9-2]** : Speech encoder test
- **DAI DOWNLINK [1-9-3]** : Speech decoder test
- **DAI OFF [1-9-4]** : DAI mode off

## **10.2 RF Test [MENU 2]**

Radio Frequency Test

### **A. SAR Test [2-1]**

This menu is to test the Specific Absorption Rate.

- **SAR Test On [2-1-1]** : Phone continuously process TX only. Call-setup equipment is not required.
- **SAR Test Off [2-1-2]** : TX process off

### **10.3 MF Mode [MENU 3]**

This manufacturing mode is designed to do the baseband test automatically. Selecting this menu will process the test automatically, and phone displays the previous menu after completing the test.

#### **A. All auto test [3-1]**

LCD, LED, Backlight, Vibrator, Buzzer, and Key Pad are tested in order for a certain time.

#### **B. LED [3-2]**

From red LED to Violet LED are turned on one by one for about 1 second, then off.

#### **C. Backlight [3-3]**

LCD Backlight and LED Backlight are on for about 1.5 seconds at the same time, then off.

#### **D. Buzzer [3-4]**

This menu is to test the volume of Melody. It rings in the following sequence.

Volume1 . Volmve2 . Volume3 .Volume0 (mute) . Volume4 . Volume5

#### **E. Vibrator [3-5]**

Vibrator is on for about 1.5 seconds.

#### **F. LCD [3-6]**

Main LCD screen resolution tests horizontally and vertically one by one and fills the screen.

#### **G. Key pad [3-7]**

When a pop-up message shows 'Press Any Key', you may press any keys including side keys, but not [Soft2 Key]. If the key is working properly, name of the key is displayed on the screen. Test will be completed in 15 minutes automatically and the screen displays the previous one.

#### **H. Sub LCD [3-8]**

Sub LCD screen resolution tests horizontally and vertically one by one and fills the screen.

## **10.4 Trace option [MENU 4]**

This is NOT a necessary menu to be used by neither engineers nor users.

## **10.5 Call Timer [MENU 5]**

### **A. All calls [5-1]**

This displays total conversation time. User cannot reset this value.

### **B. Reset settings [5-2]**

This resets total conversation time to this, [00:00:00].

## **10.6 Fact. Reset [MENU 6]**

This Factory Reset menu is to format data block in the flash memory and this procedure set up the default value in data block.

## **10.7 S/W version [MENU 7]**

This displays software version stored in the phone.

### **Attention**

- Fact. Reset (i.e.Factory Reset) should be only used during the Manufacturing process.
- Servicemen should NOT progress this menu, otherwise some of valuable data such as Setting value, RF Calibration data, etc. cannot be restored again.

# **11. STAND ALONE TEST**

## **11.1 Introduction**

This manual explains how to examine the status of RX and TX of G5200/W5200 model.

### **A. Tx Test**

TX test- this is to see if the transmitter of G5200/W5200 is activating normally

### **B. Rx Test**

RX test- this is to see if the receiver of G5200/W5200 is activating normally.

## **11.2 Setting Method**

### **A. COM port**

- a. Move your mouse on the “Connect” button, then click the right button of the mouse and select “Com setting”.
- b. In the “Dialog Menu”, select the values as explained below.
  - Port : select a correct COM
  - Baudrate : 38400
  - Leave the rest as default values

### **B. Tx**

#### **1. Selecting Channel**

- Select one of GSM or DCS Band and input appropriate channel.

#### **2. Selecting APC**

- a. Select either Power level or Scaling Factor.
- b. Power level
  - Input appropriate value GSM (between 5~19) or DCS (between 0~15)
- c. Scaling Factor
  - A ‘Ramp Factor’ appears on the screen.
  - You may adjust the shape of the Ramp or directly input the values.

### **C. Rx**

#### **1. Selecting Channel**

- Select one of GSM or DCS Band and input appropriate channel.

#### **2. Gain Control Index (0~ 26) and RSSI level**

- See if the value of RSSI is close to -16dBm when setting the value between 0 ~ 26 in Gain Control Index.
- Normal phone should indicate the value of RSSI close to -16dBm.

## **11.3 Means of Test**

- a. Select a COM port
- b. Set the values in Tx or Rx
- c. After setting them all above, press Start button of Signal.

# 12. AUTO CALIBRATION

## 12.1 Overview

AutoCal (Auto Calibration) is the PC side calibration tool that perform Rx and Tx calibration with Agilent 8960 or other equipment. AutoCal generate calibration data by communicating with phone and measuring equipment and write it into calibration data block of flash memory in GSM phone.

## 12.2 Requirements

- Microsoft Windows98/ME
- AutoCal.exe
- GSM phone
- Agilent 8960 ( or other equipment )

## 12.3 Menu and settings

- **Edit → Ramp** : Show reference power ramp window. Reference ramp is used in APC procedure. You can open or save reference ramp data and edit it on notepad.

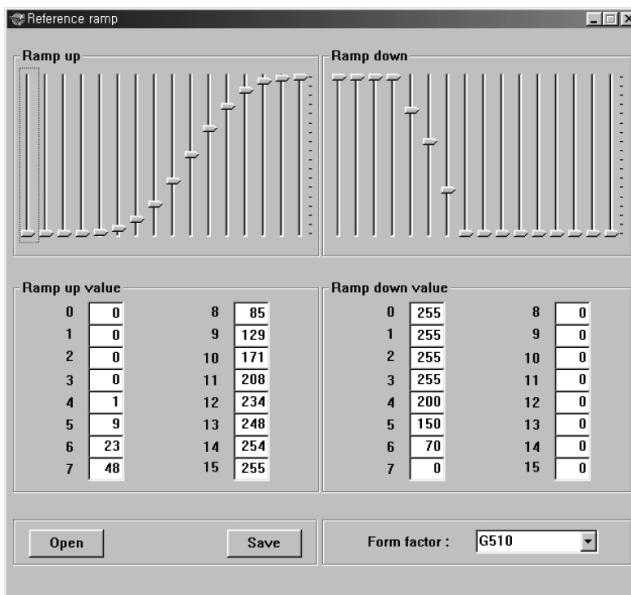

Figure 12-1. Reference ramp window.

- **Edit → Make bin & write** : Make binary file from measured calibration data and write to the phone. The name of binaryfile is cal.bin by default. You can change it at Option → Settings → Bin files tab.
- **Edit → Make bin as** : Make binary file as the other name.
- **Edit- → Make RF & BB bin** : Make RF(AGC, APC) bin and BB(ADC) bin separately.

## 12. Auto Calibration

---

- **Connection → Connect to phone** : Connect to the phone which you want to measure. This procedure checks whether the PC is connected to “Ag8960” or not. If not connected to “Ag8960” try to connect to “Ag8960”. After that it performs sync. procedure with phone. If the sync. procedure is successful state column on statusbar changed to SETUP else you should disconnect phone and try it again from the beginning. All measurement is performed at state SETUP
- **Connection → Disconnect phone** : Disconnect phone.
- **Connection → Port setting** : Show COM port setting dialog you can change port number, baud rate etc.
- **Connection → Connect to Ag8960** : Connect to Agilent 8960.
- **Connection → Disconnect Ag8960** : Disconnect Agilent 8960.
- **Option → Settings → Gpib state** : Show current primary Gpib state.
- **Option → Settings → MPL** : Set max Tx power level used in APC procedure.
- **Option → Settings → CL** : Set cable loss value.
- **Option → Settings → Bin file** : Set default binary file name.

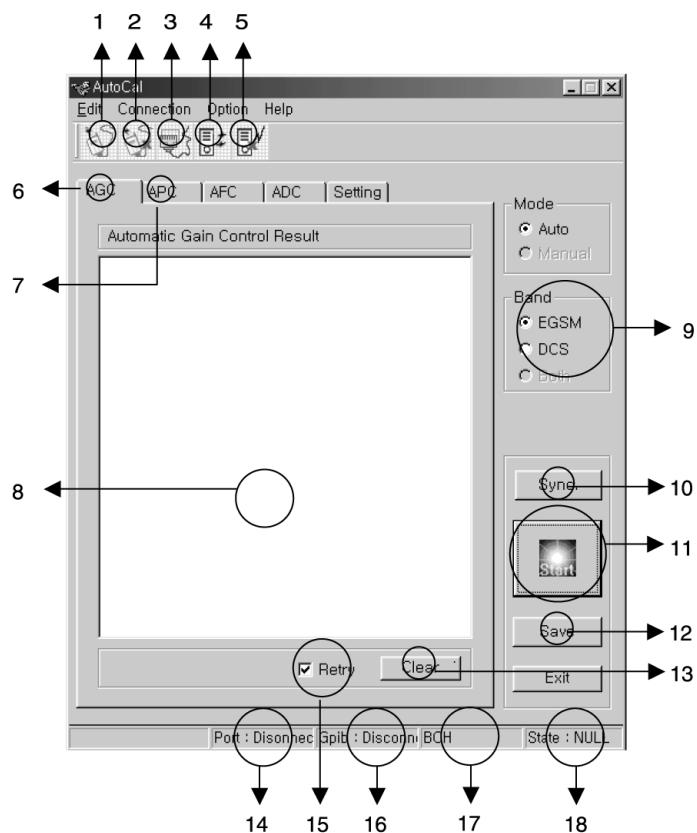

Figure 12-2. Buttons and status bar

1. Connect to phone	8. Result window	14. Port connection state
2. Disconnect phone	9. Band setting	15. Retry button
3. Port setting	10. Sync. Button (button 2 + button 1)	16. Ag8960 connection state
4. Connect to Ag8960	11. Start measure	17. Informations.
5. Disconnect Ag8960	12. Save result	18. Current state.
6. AGC tab	13. Clear result window	
7. APC tab		

## **12.4 AGC**

This procedure is for Rx calibration.

In this procedure, We can get RSSI correction value. Set band EGSM and press Start button the result window will show correction values per every power level and gain code and the same measure is performed per every frequency.

## **12.5 APC**

This procedure is for Tx calibration.

In this procedure you can get proper scale factor value and measured power level.

## **12.6 ADC**

This procedure is for battery calibration.

You can get mainBatteryConfigTable and temperatureConfigTable

## **12.7 Setting**

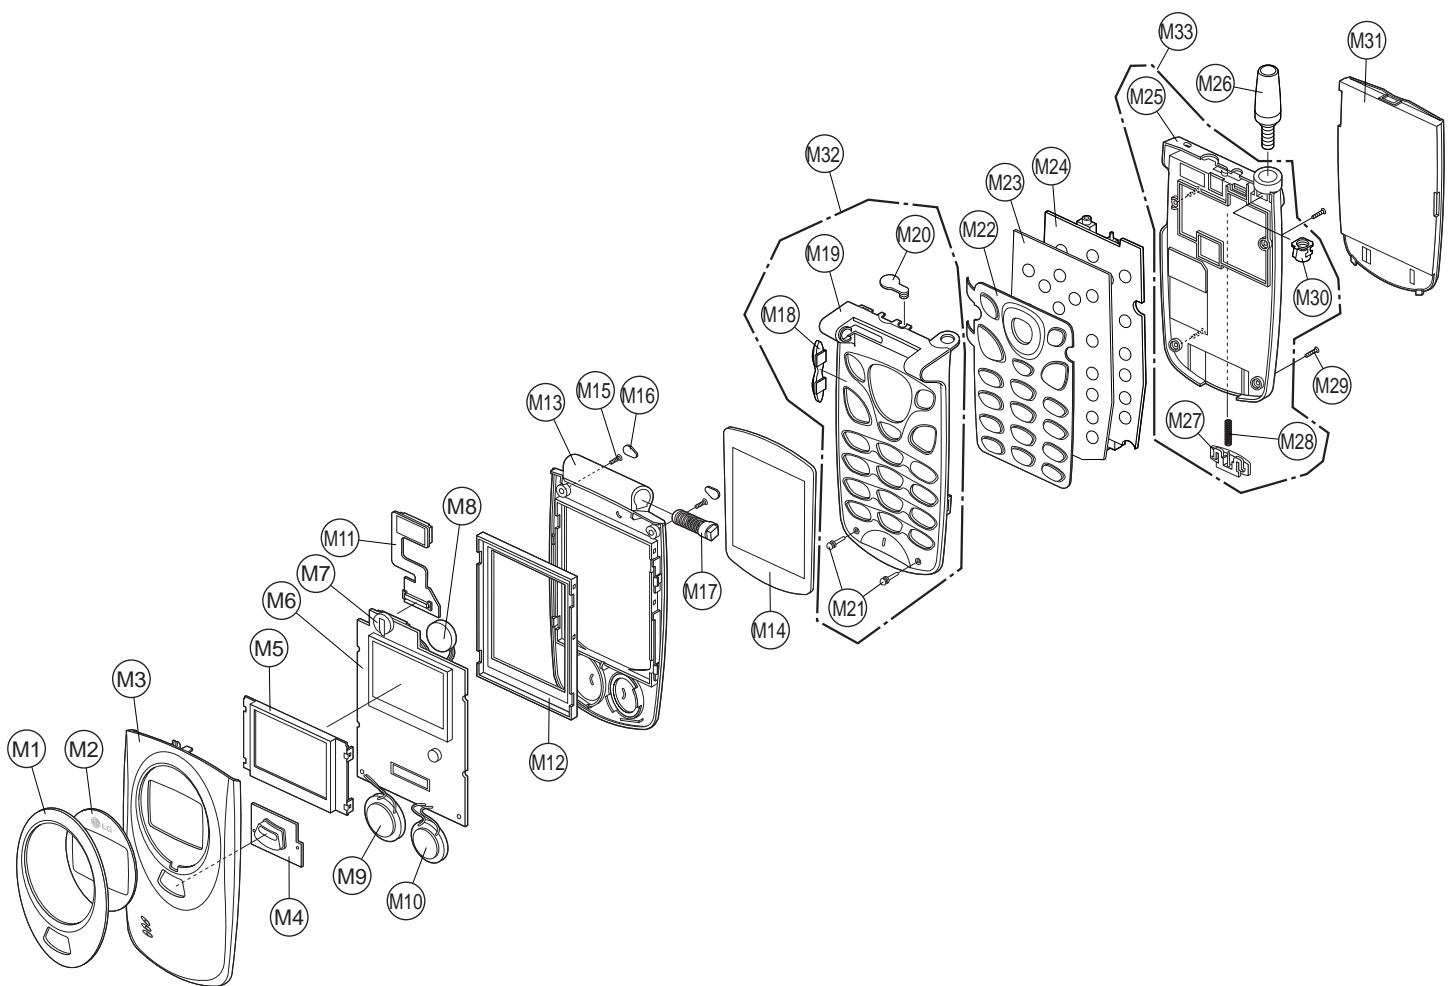

Select automatic calibration item. If you uncheck one item calibration will stop from the unchecked item. This is useful when you want to process only one item.

## **12.8 How to do calibration**

- A. Connect cable between phone and serial port of PC.
- B. Connect Ag8960 equipment and phone.
- C. Set correct port and baud rate.
- D. Press “Connect to phone” button so that the state change to SETUP.
- E. Set band to EGSM.
- F. Select AGC tab.
- G. Press Start button. AutoCal process all calibration procedure
  - i. AGC EGSM
  - ii. AGC DCS
  - iii. APC EGSM
  - iv. APC DCS
  - v. ADC
- H. After finished all measurement. The state is return to SETUP.
- I. Select Edit → Make bin & write then cal.bin file will be generated and then the calibration data will be written into phone.

5	R420	ERHY0000214	RES, CHIP	1	51 ohm, 1/16W, J, 1005, R/TP	Yes	
5	R421	ERHY0000214	RES, CHIP	1	51 ohm, 1/16W, J, 1005, R/TP	Yes	
5	R422	ERHY0000201	RES, CHIP	1	0 ohm, 1/16W, J, 1005, R/TP	Yes	
5	R423	ERHY0000227	RES, CHIP	1	240 ohm, 1/16W, J, 1005, R/TP	Yes	
5	R424	ERHY0000203	RES, CHIP	1	10 ohm, 1/16W, J, 1005, R/TP	Yes	
5	R425	ERHY0000220	RES, CHIP	1	100 ohm, 1/16W, J, 1005, R/TP	Yes	
5	R427	ERHY0000247	RES, CHIP	1	2.2K ohm, 1/16W, J, 1005, R/TP	Yes	
5	R428	ERHY0000265	RES, CHIP	1	20K ohm, 1/16W, J, 1005, R/TP	Yes	
5	R429	ERHY0000245	RES, CHIP	1	1.8K ohm, 1/16W, J, 1005, R/TP	Yes	
5	R430	ERHY0000141	RES, CHIP	1	39K ohm, 1/16W, F, 1005, R/TP	Yes	
5	R431	ERHY0000203	RES, CHIP	1	10 ohm, 1/16W, J, 1005, R/TP	Yes	
5	R432	ERHY0000255	RES, CHIP	1	5.6K ohm, 1/16W, J, 1005, R/TP	Yes	
5	R433	ERHY0000296	RES, CHIP	1	1M ohm, 1/16W, J, 1005, R/TP	Yes	
5	R434	ERHY0000203	RES, CHIP	1	10 ohm, 1/16W, J, 1005, R/TP	Yes	
5	R435	ERHY0000203	RES, CHIP	1	10 ohm, 1/16W, J, 1005, R/TP	Yes	
5	R436	ERHY0000247	RES, CHIP	1	2.2K ohm, 1/16W, J, 1005, R/TP	Yes	
5	R437	SETY0001201	THERMISTOR	1	NTC, 22 Kohm, SMD, 1.0°/0.5 / NSM4 SERIES	Yes	
5	R439	ERHY0000220	RES, CHIP	1	100 ohm, 1/16W, J, 1005, R/TP	Yes	
5	R440	ERHY0000289	RES, CHIP	1	270K ohm, 1/16W, J, 1005, R/TP	Yes	
5	R441	ERHY0000263	RES, CHIP	1	15K ohm, 1/16W, J, 1005, R/TP	Yes	
5	R442	ERHY0000201	RES, CHIP	1	0 ohm, 1/16W, J, 1005, R/TP	Yes	

### 13. EXPLODED VIEW & REPLACEMENT PART LIST

---

Level	Location No.	Part No.	Description	QTY	Specification	Service	Remark
5	R443	ERHY0000237	RES, CHIP	1	680 ohm, 1/16W, J, 1005, R/TP	Yes	
5	R444	ERHY0000254	RES, CHIP	1	4.7K ohm, 1/16W, J, 1005, R/TP	Yes	
5	R445	ERHY0000201	RES, CHIP	1	0 ohm, 1/16W, J, 1005, R/TP	Yes	
5	R446	ERHY0000214	RES, CHIP	1	51 ohm, 1/16W, J, 1005, R/TP	Yes	
5	R447	ERHY0000201	RES, CHIP	1	0 ohm, 1/16W, J, 1005, R/TP	Yes	
5	R472	ERHY0000201	RES, CHIP	1	0 ohm, 1/16W, J, 1005, R/TP	Yes	
5	S304	ESCY0002501	SWITCH, TACT	1	12 V, 0.05 A, HORIZONTAL, 220 G, G5200 TACK S/W	Yes	
5	S308	ESCY0002501	SWITCH, TACT	1	12 V, 0.05 A, HORIZONTAL, 220 G, G5200 TACK S/W	Yes	
5	SW401	ENWY0001901	CONN, RF SWITCH	1	ANGLE, SMD, 0.5 dB, H: 2.6 mm, *1.8	Yes	
5	U101	EUSY0100401	IC	1	TSSOP,28 PIN, R/TP, GSM POWER MANAGEMENT SYSTEM	Yes	
5	U102	EQFP0003301	TR, FET, P-CHANNEL	1	SOT-6, 1.6 W, 30V, 24 A, R/TP, Charging P-CHANNEL FET	Yes	
5	U201	EUSY0077702	IC	1	SOT23-8,8 PIN, R/TP, DUAL COMPARATOR/+21~+5.5 SINGLE SUPPLY	Yes	
5	U202	EUSY0077401	IC	1	SOT23-6, 6 PIN, R/TP, SPDT ANALOG SWITCH	Yes	
5	U203	EUSY0111601	IC	1	32-PIN QFN, 32PIN, R/TP, MA3/40 TONES /FM+ WAVEFORM TABLE	Yes	
5	U204	EUSY0077401	IC	1	SOT23-6, 6 PIN, R/TP, SPDT ANALOG SWITCH	Yes	
5	U205	EUSY0122501	IC	1	LLP-6, 6 PIN, R/TP, 300mA CMOS LDO / 3.3V	Yes	
5	U301	EUSY0129501	IC	1	SC-74A FIT, 3 PIN, R/TP, HALL EFFECT SWITCH	Yes	
5	U302	EUSY0077301	IC	1	SC70-6/SOT23-6, 6 PIN, R/TP	Yes	
5	U401	EUSY0100502	IC	1	8-LEAD US8, 8 PIN, R/TP, UHS DUAL 2 INPUT AND GATE	Yes	
5	U405	SFAY0001301	FILTER, SEPERATOR	1	880960, 17101880, 1.3dB, 14 dB, 30 dB, 25 dB, ETC, 5.4*4.0*1.8 Antenna switch	Yes	
5	U407	SFSY0011201	FILTER, SAW	1	1842.5 MHz, 2*2.5*1.0, SMD	Yes	
5	U408	SFSY0011301	FILTER, SAW	1	942.5 MHz, 2*2.5*1.0, SMD	Yes	
5	U409	EUSY0100101	IC	1	RF-K, 12 PIN, R/TP, RF POWER AMPLIFIER	Yes	
5	U411	EUSY0129801	IC	1	Land Grid Array(LGA), 64 PIN, R/TP, 9 x 9 mm	Yes	
5	U412	EUSY0100001	IC	1	8-LEAD MICRO SO,8 PIN, R/TP, 50 DB GSM PA CONTROLLER	Yes	
5	U413	EUSY0077201	IC	1	SOT(DCK), 5 PIN, R/TP	Yes	
5	U414	EUSY0076701	IC	1	SOT-23-6, 6 PIN, R/TP	Yes	
5	V201	ERVZ0000101	RES, VARIABLE, ETC	1	ohm, PIN, , SMD, R/TP, 1005 SIZE CHIP VARISTOR	Yes	
5	V202	ERVZ0000101	RES, VARIABLE, ETC	1	ohm, PIN, , SMD, R/TP, 1005 SIZE CHIP VARISTOR	Yes	
5	V203	ERVZ0000101	RES, VARIABLE, ETC	1	ohm, PIN, , SMD, R/TP, 1005 SIZE CHIP VARISTOR	Yes	
5	V204	ERVZ0000101	RES, VARIABLE, ETC	1	ohm, PIN, , SMD, R/TP, 1005 SIZE CHIP VARISTOR	Yes	
5	X101	EXXY0004601	X-TAL	1	0.32768 MHz, 20 PPM, 12.5 pF, 65000 ohm, SMD, 6.9*1.4*1.3	Yes	
5	Y401	EXSK0000801	VCTCXO	1	13.0 MHz, PPM, 10 pF, SMD, 5.0*3.2*1.5	Yes
